

TRAINING

Training in the most effective use of applications, management and control of computing.

Training @ FREE from The National Computing Centre Limited, Oxford Road, Manchester M1 7ED. Telephone 061 275 0333. Telex 658662.

NEWS IN BRIEF

Viewdata deal for CAP Sogeti

THE contract to implement France's electronic telephone directory project, which is planned to put all 34 million telephone subscribers on viewdata for free by 1992, has gone to software house CAP Sogeti. Honeywell Bull and Mita-TRT are to provide the hardware.

Hughes-ITT link

HUGHES Aircraft and ITT have set up a joint company called Tacom to develop terminals for use by the US forces in the joint tactical information distribution system planned for the mid-1980s. The system aims to provide secure voice and data communication using digital transmission techniques that are resistant to jamming or interception.

UN deal for IBM

IBM has won a UN Development Program contract for 16 4300s for collecting census data in China. Worth \$2.8 million, the contract is for a central 4341 at the Peking bureau of statistics and a network of 4300s, one in each of the 15 provinces of the People's Republic.

System X men out

OVER 2,000 System X development engineers have been suspended without pay by GEC Telecommunications at Coventry following a strike by six key men in pursuit of a pay claim by ASTMS of 22% plus other benefits. GEC has offered 17% with conditions including some shift work and the use of CAD.

MINICOMPUTER TOTAL

The world's most widely installed data base management system is used on DEC PDP/11 and VAX; HONEYWELL Level 6; PRIME; PERKIN ELMER-IBM System 34; GEC 4000 and ICL 2903/4/5 minicomputers.

'Amicable agreement' in copyright skirmish

AN 'amicable and mutually satisfactory agreement' has been reached between Clive Sinclair, originator of the ZX80 '£100 computer' (CW, February 7), and Chris Cary of Compuser, who was prevented by a recent court order from marketing a cheaper copy of the machine, called MicroAce.

Sinclair is to get 5% royalty on sales of MicroAce, which is to be marketed only in the US in a kit form. The agreement also allows MicroAce to follow Sinclair's design more closely than at present.

Sinclair seemed to be satisfied with the outcome of the case under current British

copyright law. "We acted swiftly and correctly and it turned out. We will not have our products copied, and that point has been effectively made."

The judge had prevented Compuser and Product Launch from promoting the MicroAce as the keyboard was similar to that of Sinclair's ZX80. Although the design inextricably linked the ROM and the keyboard, the ROM was ignored at the first hearing as being not immediately visible, and was in any case not identical to the ZX80's microlevel.

"We had a bit of a skirmish, which should

put people off copying ROMs," said Cary, "but it appears that ROM isn't copyrightable. Perhaps one day a law will be made, but we didn't want to be the British test case — it would have taken up too much time and money."

"At the end of the day we were just a couple of engineers trying to make a buck, not a pair of gangsters," he added, "so we came to an amicable agreement."

Although this particular skirmish is settled, the case is bound to add fuel to the controversy over software copyright.

Canadian chips from PO and GEC-Marconi

CANADIAN telecommunications manufacturer Mitel has licensed British Telecom (a part of the Post Office) and GEC-Marconi to make VLSI integrated circuits using its proprietary ISO-CMOS technology.

Plessey is also expected to make a licence on the technology. British Telecom is to develop prototype devices at its Martlesham Heath laboratory and establish, in consultation with industry, standards for use in telecommunications and other systems.

Marconi and Plessey are to produce devices for their own consumption and for the world market.

ISO-CMOS is a technique which uses silicon dioxide instead of reverse biased P-N junctions to isolate transistors from each other in the complementary pair configuration of CMOS circuits. And polysilicon is used for transistor gates and electrical interconnections.

These two features increase transistor packing densities and allow devices to run at up to 50 megahertz while reducing power consumption.

They also allow both analogue and digital functions to be carried out on the same chip.

GEC research director Derek Roberts rates the technology the best available. GEC-Marconi is

to build a factory near Lincoln to produce ISO-CMOS in about a year.

British Telecom is currently spending £5 million a year on semiconductor design and development and has electron-beam and photolithographic equipment suitable for ISO-CMOS production.

Receiver called in by Nascom creditor

AFTER failing to find alternative buyers, or to persuade Grove-wood Securities to increase the £500,000 loan it made last year, Nascom Microcomputers has asked Grove-wood, its major creditor, to call in a receiver.

Nascom attributes the failure to slow recovery of development costs and delays in the supply of components.

A spokesman for W. H. Carr Gully, who has been appointed receiver, said it was too early to say why Nascom had run into trouble, but the company was

continuing to trade and was still selling products.

There were no redundancies and prospects of finding a buyer were good, he said.

The committee of the International Nascom Microcomputer Club, the user group that was run with secretarial support from the company, have all resigned, but committee members hope to continue to produce the INMC newsletter and to resume their functions if support becomes available from whoever buys the company.

The launch of Freuden's show in Wembley today (Friday) comes as a major organisation, Aides Informes, is set up to sell the likes of challenged Mickie.

The new company, Mickie on SWTP, has £2,700 upwards. Freuden, who is a partner in the company, is a former medical systems specialist, and £400 for software, runs on a standard PC, and about £2,000.

Interviewing by computer, which would involve areas such as personnel, insurance as well as medical, saves time and expense, ensuring that interviewers are not embarrassed or affected by the mood and presence of other person.

grammer productivity; increased co-ordination between Industry Training Boards.

Another recommendation is that selection procedures for trainees should be reviewed to avoid "qualification overkill".

Sometimes degrees and other qualifications are demanded when they are not necessary.

The Engineering Industry Training Board needs to be enhanced, with its role extended, the sub-committee says.

The chairman of the sub-committee, Ian Benson of white-collar union AUEW-TASS, said that he did not think increased salaries in computing would alleviate the staff shortages much.

Freudian progress patient interviews

AN interviewing system, Freud, developed on Cambridge Pet hardware at the University of London's Institute of Psychiatry, is taking a new approach to patient interviews.

In design Freud differs radically from Mickie, the tonne system developed by the National Physiological Laboratory by a team led by Dr Chris Evans (CW, 1978). Where Mickie asks questions that are simply answered yes or no, Freud asks questions that are designed to be flexible for doctor and patient.

The launch of Freud's show in Wembley today (Friday) comes as a major organisation, Aides Informes, is set up to sell the likes of challenged Mickie.

The new company, Mickie on SWTP, has £2,700 upwards. Freuden, who is a partner in the company, is a former medical systems specialist, and £400 for software, runs on a standard PC, and about £2,000.

Interviewing by computer, which would involve areas such as personnel, insurance as well as medical, saves time and expense, ensuring that interviewers are not embarrassed or affected by the mood and presence of other person.

grammer productivity; increased co-ordination between Industry Training Boards.

Another recommendation is that selection procedures for trainees should be reviewed to avoid "qualification overkill".

Briefing

TUC seeks deal with GBI

THE TUC is aiming to reach a joint agreement with the Confederation of British Industry over a policy to promote the advancement of technology.

There would be a joint public condemnation, the TUC hopes, of restrictive and deflationary policies which hold back development, and a call on governments to stimulate growth.

32-bit chip advance

ENGINEERING Laboratories has announced what is said to be the industry's first true 32-bit word super minicomputer based on a single slot central processor. Called the Concept/32 the machine also incorporates a single slot I/O processor and a single slot memory board called the Integrated Memory Module that holds 256K-bytes of MOS memory.

Univac gets vote

AN ORDER worth £1.5 million has been placed with Univac by Merseyside County Council for an 1100/81 system with online and real time facilities to replace an ICL 1904S. Database and distributed communications applications are planned. ICL, IBM and Honeywell all competed for the contract.

FBI probe at IBM

AN IBM employee, a computer and more than \$100,000 are involved in an FBI investigation at IBM's offices in Springfield, Missouri. IBM confirms the investigation but will say no more, and the FBI describes the case as "routine robbery."

Bradford backing

BRADFORD: Metropolitan Council is backing a microprocessor power supply manufacturer, Microvitec, in a project for building microcomputers and display terminals.

Bradford has set aside £500,000 worth of buildings and land for Microvitec which plans to have 300 staff within two years.

Infoline deal

AGREEMENT has been reached on the takeover of Infoline, the online information service, by Pergamon Press (CW, June 12). The purchase will provide Infoline with £500,000 injection.

Two of the existing shareholders, the Department of Industry and Derwent Publications, are to withdraw.

ICL bids for share of world PC market

WITH the aim of becoming a major world-wide supplier of multi-layer printed circuit boards, ICL has launched a new marketing operation to exploit the capabilities of its highly productive multi-layer PC board manufacturing operations at Plymouth, Grova, Manchester and Kildgrove, Staffs.

ICL claims that it now has more than 50% of the fine line multi-layer PC board production in the UK and has set up an operational division called ICL Logic within its manufacturing group to handle the manufacture of all PC boards for its own customers as well as for outside customers.

Personnel include 800 staff and a marketing team which has already picked up orders worth

£400,000 from outside customers. Outside business is expected to be worth £5 million by 1982.

ICL says that multi-layer boards now account for 90% of its PC board production and that the most complex boards now contain up to 22 individual layers.

The announcement also includes a new model of the 3042 Attached Processor for 3033 installations. Previously APs have made use of the main processor functions.

For further information on the complete 2600 range contact Cifer today.

CIFER SYSTEMS LIMITED

Factory and South Western Sales: Ave Way, Bournemouth, Dorset. Tel: Bournemouth (0202) 704602 Telex: 448872.

Northern Area Sales: 2nd Floor, Newington House, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421

Downtime

by Chad

Is this the final program?

THE string of stories about the end of the world being narrowly avoided after "computer errors" is becoming positively boring. The only surprising thing is that the EOTW has not happened already, given the utter incompetence of the US Department of Defence demonstrated in the cock-up over the Iranian hostages rescue. What you don't realise is that the Domesday stories are all part of a cunning plot originating from Moscow.

These scheming subversives are always careful to remember the lessons they learnt at their mothers' knees, unlike us supposedly more sophisticated Westerners.

Can you recall the story of the boy who cried "Wolf"? The Krenlinites can, and it has inspired them, and it can now reveal, to plant a highly trained cadre of fifth-columnists among the eighty-columnist programmers of the US Air Force. These have been instructed to rig the NORAD system so that it gives false alarms at regular intervals. Then when the Russians launch their real attack and the system cries "Hovaci!" no one will believe it.

"Try to think of me as a word processor."

Sending Buzby down the river

I SEEM to spend a lot of time laying into the Post Office, so it is only right I should give the people there due credit when they achieve something really remarkable. It certainly seemed to me they had done that the other day when I was lolling by the side of Danham Lock in Middlesex. Along came a narrow-boat and through one of the windows I could see a real live telephone.

It was a well-mounted model, and I could even read the number: Rickmansworth something-or-other. What wonders will modern technology come up with next, I thought.

I started trying to work out what mechanism the boat would need to pay out an enormous long wire all along the bottom of the Grand Union Canal as it processed gracefully on its way. But the expense it sounds like the man who invented a marvellous money-saving electric car and then had to pay £50,000 for the fee.

Then think what would happen to the wire when the lock gates closed on it. Heartfelt phone calls cut off in their prime? No, I gather there is a little socket at the boat's normal mooring into which they plug when they are there.

GILB'S MYTHODOLOGY

Who's being trained to be an Infotect?

Tom Gilb is an independent consultant, lecturer and author on computing topics.

ACCORDING to a recent report in the Computer press, the word "infotecture" was invented by a Frenchman to describe activity close to what is today called in English "software engineering."

The term infotecture is very attractive. It translates directly into most European languages (infotektur or infotekture). It is short. It is not weighted down with the word "software". Software is too often taken to mean only programs such as operating systems, database management systems, compilers and the like. It does not fit the minds of many professionals clearly apply to applications programs, databases or files, data design of far examples input, documentation, and it certainly does not apply to the selection and configuration of hardware or the organisational problems such as training, ease of learning, motivation, and responsibility for results, all of which are interesting subjects in the context of the architecture of an information processing system development.

Infotecture is in other words a higher level term. It can make use of software engineering, but it encompasses much more. I believe that it would be a healthy step if we asked ourselves as a profession: do we need an infotecture discipline? Is anybody getting the necessary professional training to be an infotect?

The term architect comes from the Greek words Archi ("chief") and tekton ("worker"). "Info" has roots in the Latin "informatio" which means "a representation, an outline, a sketch" and is itself derived from "informare": to give form, to represent, to inform.

Infotecture has reasonable roots, although the immediate intention is to make use of the general public's awareness of the association of the word info with data processing and the

wide art of information processing systems. In addition the "tecture" part has a clear immediate association with the high level engineering discipline of architecture.

I have exposed readers of this column to a set of techniques which I have collectively called "Design by Objectives". I would certainly include DBO methods as candidates for tools in practical infotecture, without making any claims that they are best or complete.

Certainly the international interest I have noticed in the Design by Objectives methods seems to result from recognition of the need for a higher level architecture method than the algorithmic and functional methods currently practised.

But I would hope that the budding infotects would spend much of their time studying examples of good and bad infotecture. At least we have plenty of the latter category available for study: perhaps we do have so many unhappy systems because of a lack of consciousness on the part of the system builders. They seem to think that any experienced Cobol carpenter is qualified to serve as chief infotect.

One of the world's largest software producing sites (about 1,800 "professionals" at one site) has recently shown warm interest in my Design by Objectives ideas. I experienced an interesting insight when they explained to me why. Their present high level system architecture methods are still highly variably practised and totally dependent on individual style. There seems to be no common language at this level, as the stringently interpretable programming languages offer at a lower level of design.

This lack of consistent and teachable method at the higher levels of systems architecture leads to a problem in systematically discovering design errors. Early design flaw identification has been proved to be of substantial practical and economic importance. Design architecture review mechanisms do exist at this site, but they are considered comparatively ineffective when matched against the effective quality inspection techniques now applied at the lower levels (module design and down) of systems architecture. Their dream is to develop an infotecture so systematically structured as to allow a much more

effective quality inspection at the higher levels.

Infotecture is not an art. It is a high level engineering discipline. I think we know enough to get on with the job, if we really want to, and refine the discipline of infotecture in the coming decades.

The question is - are we motivated?

Here we are screaming at the top of our lungs for more carpenters, yet I believe that one of the chief reasons for the disturbing manpower demand is precisely a lack of infotecture.

An infotect would "design around" the lack of professionals, by both reducing and eliminating the work content of the design.

This is not a theory. I have practised it dramatically for many years. Carpenters can only work in wood - and if we let them fill the infotect shoes by default, then they will continue to specify the continued new construction of more wooden shacks.

The mythodology says there is a professional shortage. I say there is an organisational problem: we are using the wrong class of professionals to determine the infotecture.

FOCUS

The MIS manager has few friends outside the DP dept

WHILE shortages and lack of general resources may well be hampering DP, installation teams, no such inhibitions appear to face the Intrepid band of industry researchers and survey compilers. Give such individuals a problem area and they will unhesitatingly launch a survey project.

Such could well have been the case of a US survey reported earlier this year on MIS management. Management Information System managers are, incidentally, this year's nomenclature for DP management.

Very broadly the survey discovered that (a) MIS managers are unlike their peers in other parts of the organisation; and (b) MIS managers are more like their employees than their peers. The report did not state the level of resources expended in unearthing such salient facts except to say it was part of a three-year research project on the motivation of computer personnel, and involved a nationwide survey.

As so often happens, Focus could have saved the study compilers much time and trouble. During the course of a single shift it could be demonstrated that the relationship between MIS managers and their colleagues outside the DP dept is distinctly uneasy. It does not result in depth, and it is not a result of a lack of communication.

on the defensive and that his relationship with user management for instance, while not exactly grovelling, includes a high element of humility.

Yes, the DPM does appreciate the problems facing the stores/warehousing operation, but installing new on-line inventory control programs will take considerably longer than six weeks. Six months might be a more realistic timescale and even then bugs could be as prevalent as the parts bins.

The DP team are currently doing their best to absorb a 500% turnover increase in producing "reminder" sales invoices. Such requirements had not been envisaged at the specification stage and are causing severe processing problems.

No, the DP team cannot spare any resources to help sort out the tangle the distribution section has created. It was their idea to declare independence and acquire their own micro system. They should try complaining to the Office of Fair Trading, the Trades Description Act or the Misrepresentation of People and Goods Act. Hardly surprisingly the survey discovered that the MIS managers had few friends outside the DP operation, and find closer rapport with their own colleagues. Researchers seldom discover that the DP operation depends very much on team work. The operator has to acknowledge that the programmer

must have access to the processor and that this access cannot always wait until the main day's tasks have been completed. Similarly the programming team should not expect the busy ops section to sort out local problem errors and when they happen. If the run aborts after five or fewer minutes, it is a case for total reject. If, however, it aborts after two hours then remedial action could be taken - providing the programmer concerned is on hand or that the operation team itself has sufficient skills to investigate.

The system team, although by preference independent of all other groups both inside and outside the DP section, sooner or later has to accept the basic

fact of installation life and liaise with the operations, programming, input and control sections. From time to time they have even been known to discuss projects with their DPM.

Maybe it is time for a survey on surveys. Often the motivations for such enterprises are those of academic achievement (publicity/promotion and more rarely) - genuine industry research. Of the collection, that of academic research is a well defined growth area. Put any two Hatfield Poly academics together and the chances are they will initiate an in-depth survey on such a topic as "the number of key strokes involved in word processing as compared to a squash match."

TEN YEARS AGO.....

From Computer Weekly of June 18, 1970.

In September the British Aircraft Corp will become the second corporation in this country to take delivery of an ICL 1900A, the most powerful British computer. Arthur, Humphreys, managing director of ICL, is reported to be in the British Isles. The first IBM System 360/40, which was delivered in the UK last week, is being installed at the London office of Charles, Fawcett and Co. General Electric, which provides a service based on an IBM 360/40, John Hunt, MP for Bromley since 1964, has been appointed president of the Institute of Data Processing. EMI has taken over Telex Design Ltd of Camberley, Surrey, and principal British company specialising in magnetic tape data storage equipment. A new service bureau which will operate as a subsidiary of two sister companies, Charbonnet Design and London, Charbonnet Computer Services, is to start operations next month.

Altergo moves into micrographics

ALTERGO has set up a new company, Altergo Services, to market and support computer-based micrographics systems. The main product to be promoted will be the Automated Records Management Systems, Arms, which enables images of documents to be accessed and transmitted from a central store to many different and widely dispersed user locations in a few seconds.

Database directors set up consultancy

DIRECTORS of the UK's two top suppliers of scientific databases, Derek Barlow of Inspec and Tany Kent of UKCIS, are resigning to set up a consultancy on online information retrieval. They aim particularly to provide advice to the European Commission and to US database suppliers.

Inspec deals with physics, electronics and computers, while UKCIS provides chemical information.

Share in US manufacturer

THE UK firm, Computer Services Centre (Holdings) has taken a 30% share in the US data entry terminal manufacturer, International Entry Systems of Seattle, which builds the Datacor portable terminal.

CSC's subsidiary, Microcoptic Systems of Acton, London, sells Datacor exclusively in the UK.

Services group profits up 157%

APPLIED Computer Techniques, the Birmingham-based computer services group, has announced a substantially increased turnover and profit figures for its financial year ended March 31. Net profits increased 157% to £502,798 and turnover rose 79% to £5,568,285.

ACT is raising about £800,000 for further expansion by a rights issue of 302,500 new ordinary shares.

Cap Gemini Sogefi well ahead

LAST year's turnover of Cap Gemini Sogefi, the world's largest software house outside the US, was \$118,230,000, up 19% over 1978. Profits before tax were \$12,889,000.

During the year, British Airways' subsidiary IAL took a 10% stake in CGS with the setting up of the UK joint-venture, IAL Gemini.

AES Wordplex announce marketing split

AES Wordplex is splitting the marketing of its two word processing product lines, 18 months after the merger which brought the two Canadian-based companies together. This is to enable salesmen to specialise and simplify their training and support, while keeping the company's financial, marketing and engineering services together.

It was felt at the time of the merger that the AES and Wordplex product lines were compatible, but according to marketing director Mike Arnold both lines have been developing their separate identities. "They do not really overlap but there will be areas where they compete," he says.

Arms is built in the US by Teknekron Controls of Berkeley, California, an autonomous division of Teknekron Inc, a high technology consultancy with more than 400 staff active in many areas of science and engineering.

Teknekron's greatest strength is in the area of sensing systems where it has supplied special equipment to customers ranging from tyre manufacturers to the US Federal Reserve Bank which uses Teknekron Ltd to detect the denaturation of old bank notes before they are destroyed.

Arms systems in various custom built forms have so far been supplied to six different customers in the US, and Altergo Services is to market them in partnership with Teknekron in the UK and also in Kuwait where Altergo already has a subsidiary company.

Teknekron says Altergo was chosen primarily because of its strength in developing software. An Arms system can be configured around a dedicated standard minicomputer, like the Data General Eclipse C/150, or controlled by a partition on a customer's existing mainframe.

In its present form Arms stores documents in microfiche form either in a modified version of one of the carousel-based automated retrieval units built by Image Systems, or in a much bigger unit developed by Teknekron itself and called the Storage, Retrieval and Scanning Module, SRSM.

After a fiche holding the required frame has been retrieved under software control the frame is scanned by a camera employing a charge coupled device array and the picture is then digitised to generate an image with a resolution of three million bits per frame or 180 lines per minute.

A vital feature of Arms is that digitised images can be held on a magnetic disc which acts as a buffer between the relatively slow mechanical microfiche retrieval unit and the electronic side of the system. Also of importance is that digitised images can be improved and enhanced by software. Greatly reduced images of very large drawings, for example, can be enhanced so that they are clearer than the original.

The user end of Arms consists of high resolution display terminals built by Teknekron itself that can also double as conventional computer terminals. If the host computer is an IBM

machine, for example, the Teknekron terminals can emulate the IBM 3277.

Arms is not entirely unique. Six years ago Stabileiron of Farnham, Hants, introduced a multi-access image distribution system (CW, March 14, 1974) called Datavision. Only one system is installed in the UK the user being Scotland Yard, although sales have also been made to police forces in West Germany. The system has now been taken over by Antares Systems of Bournemouth which is bringing out a new version with image digitising and manipulation features said to be similar to those offered by Arms. In its present form the Antares system distributes analogue images over coaxial cables which offers far less flexibility than handling digitised images.

Winner of General Automation's essay competition on "Energy - where do we go from here?" was Janet Harris of Onslow School, Hatfield. Her school received the first prize of a QA mini with two VDUs, printer, and discs, in all worth £30,000. Our picture shows Janet with the judges, among whom were Professor Eric Lalliwala (left) and Dr Magnus Pyke (right). There were 1,600 entries.

Micros in schools working group

A WORKING group on microcomputers in schools has been set up by the Sociol Science Research Council, to consider what role the Council should take in determining the course taken by computer education. Anyone with suggestions on the subject is asked to submit them to the group, which is aiming to complete its report by the autumn.

The SSRC could fund research into the use of micro in schools; this would be on a long-term basis while the Department of Education and Science and other bodies dealt with more immediate issues. The sort of questions to be asked include: How should the curriculum be developed; how

should hardware be introduced and what options are there for this; what software is needed and how can it be produced; how should teachers be trained; what support services do schools require.

Submissions should be sent as soon as possible to Glyn Davies at the SSRC, 1 Temple Avenue, London EC4Y 0RD.

FLOPPY DISKS?

SLOPPY STORAGE?

Tray or binder storage - you name it, Twinklock makes it. And makes it better.

In fact, Twinklock floppy disk accommodation provides the most comprehensive, efficient and (dare we say it) attractive means of keeping your recorded information safe, sound and readily accessible.

FLOPPY DISK TRAYS: These steel trays come complete with smoked perspex top, support plate, guide cards, and full colour-coded index system. 100 or 50 disk capacity Multi-Stor outboard or trolley housing is available.

FLOPPY DISK BINDER: Hand-bound by craftsmen, these quality binders have 6 panels, each holding six 5" disks.

Binders come in standard book form or in "easel" configuration which presents disks in a convenient position for the operator.

So choose Twinklock - and put an end to sloppy floppy disks!

I'm tired of sloppy storage for my floppy disks. Please send me details of your range:

These disabled trainees are as good as any

"DON'T look at what we can't do," said Geoff Busby speaking of the disabled in computing (Page Six, January 31). "Look at what we can do." With the first TOPS course in computer programming just finishing at Queen Elizabeth's Training College, this seemed the perfect opportunity to take up Geoff Busby's challenge.

The Queen Elizabeth's foundation for the disabled is a residential college at Leatherhead, Surrey, for disabled people and provides training in many subjects leading to normal employment. The computer programming course is a recent addition to the college's syllabus and is financed by the TOPS scheme and operated by ICL.

Seven students have taken part in the scheme, and there is already a long waiting list for future courses. To qualify for the course applicants have to pass aptitude tests and an interview, and must be sufficiently disabled to be unable to participate in any conventional training courses.

"Severely disabled" is a difficult term to define, but in this case it means that most students will be immobile and usually in wheelchairs. The course is the standard ICL TOPS programming course, but lasts two weeks longer, mainly because a great deal of time is taken up with travelling problems. As most of the students live some distance from the college, bank holidays have to be extended to cope with the difficulties of getting from home to college.

The course comes under the college's Business Studies Department and students receive some business studies training from Queen Elizabeth's own staff. The programming training is done by ICL lecturers.

Eight students took part in the scheme, and varied in age and experience. They included a Vietnamese "Boat Person", an ex-meningitis director and a specialist who had already written two books and obtained an Open University degree before starting the TOPS course.

There was also a wide variety of work experience and disability within the group. Some had worked for many years; others had never had the opportunity to work before.

The problem of gaining work experience is a vicious circle for any school or college leaver. A disabled person looking for a job finds the obstacles even greater. Few employers are prepared to take the risk of recruiting

been proved by the fact that students completed it and are now as proficient in programming as anyone who has gone through the TOPS scheme.

TOPS courses throughout the country boast a placement figure of about 80%; consequently it is alarming that, to date, not one of the graduates of the disabled course has been able to find employment.

The college goes to great lengths to find work for its students. The staff try to keep in constant touch with employers. The BCS specialist group for the disabled has also recently compiled a list of interested employers and companies which it is holding on computer.

Students have been given instruction in applying for jobs and every step has been taken to find suitable work for them. Unfortunately it is now proving difficult to get employers to commit themselves to taking on disabled staff.

However, those who have completed the course have fought all the odds against them. The programming course means working in the evenings and at weekends and spending 12 weeks away from their families. Few of the successful students had any previous computer experience.

Lam Phat Luc came to this country from Vietnam where he had lost his right leg in the Vietnam War. It seems callous to say that compared to some people he is not really disabled; but the college has a policy of usually accepting only students who are unable to move.

He is now living in Belfast

with his younger brothers and sisters. Lam Phat Luc's success is a double accomplishment: not only has he mastered a strange language and a completely new life-style but he has also learnt to write programs in Cobol. "It has been difficult," he agreed. "If there is a term or word I do not understand the others have to try and explain it as simply as possible." Obviously there are not many Vietnamese dictionaries which contain comprehensive definitions of computer terminology.

The seven students range in age from 21 to 55. The eldest in the group is John Draper. His particular story shows that disability is not always something that people suffer from birth, and it can in fact happen to anyone. John was enjoying a successful career as a managing director when he was stricken by kidney failure. Because he had to have regular treatment from a kidney machine, he thought that his career was at an end.

"I decided to take this course in computer programming not only because I wanted to pursue a second career but also because I felt computing was an up-and-coming growth industry," he said. "And programming is a job I can do despite my handicap."

Although without previous experience, he has a good idea of the industry and knows a great deal about the administration side of computer applications. For him, a career in computing is a complete departure and a fresh start.

For many disabled people the course provides the opportunity to start work for the first time in their lives.

Robert Hergreave is 22 and suffers from muscular dystrophy. He has never had a job and before taking the TOPS course he was unemployed. Before that he was at technical college studying for A-levels. During the 18 months he was unemployed, Robert had only one interview.

Failure is something which the disabled take for granted. When we visited the students at Queen Elizabeth's College they still had several weeks of the course to complete. Most of them were pessimistic about their chances of getting a job.

"The course has been very good and very useful," said Robert Trent, also confined to a wheelchair. "But it's going to be dodgy getting a job. People just aren't willing to take the risk."

Simon Watson had actually done clerical work before going on the TOPS course. "We just have to try that bit harder," he said. "Being immobile doesn't help."

Some students have been luckier than others. Glyn Veron, for example, had already completed an Open University degree course and written two books before deciding to study computer programming. Glyn

programmer include the facility to invoke the Dialog processor to handle much of the interaction between the user and the system, thus reducing the amount of Cobol which has to be written in a new application.

There is also a screen format generator which enables programmers and people and users as well, to set up their own screen formats and set their own validation rules. And once these screen formats are stored, they become available to any other application, regardless of the programming language in which it is written.

The features are similar to those on the ICL ME29 (Page Six, April 3), and underline a steady trend towards making programming easier and programmers more productive. Clearly there are benefits, but are the benefits wholly unimpaired from the point of view of the programmer? Page Six would like to hear your views.

But at the same time, the approach will tend to de-skill the role of the existing personnel and although the facility is put over as enabling users of the system to become more productive, this could well be at the expense of making the job more boring.

If people become quick bored with their jobs they become less productive, one might say. The question of whether the approach is of interest to the

person who is not only inexperienced but also physically incapacitated. Will they be able to cope with a full-time job? What about transport? Will any special aids be necessary?

The aim of the courses at Queen Elizabeth College is to equip disabled people with the ability and confidence to occupy a normal job in society. The computer programming course provides intensive training in Cobol, and after the 12 weeks the students have written and run a suite of five programs.

The success of the course has

The success of the course has

someone who is not only inexperienced but also physically incapacitated. Will they be able to cope with a full-time job? What about transport? Will any special aids be necessary?

The aim of the courses at Queen Elizabeth College is to equip disabled people with the ability and confidence to occupy a normal job in society. The computer programming course provides intensive training in Cobol, and after the 12 weeks the students have written and run a suite of five programs.

ICL lecturer Sally Kemp checks a listing with Simon Watson.

tunity to start work for the first time in their lives.

Robert Hergreave is 22 and suffers from muscular dystrophy. He has never had a job and before taking the TOPS course he was unemployed. Before that he was at technical college studying for A-levels. During the 18 months he was unemployed, Robert had only one interview.

Failure is something which the disabled take for granted. When we visited the students at Queen Elizabeth's College they still had several weeks of the course to complete. Most of them were pessimistic about their chances of getting a job.

"The course has been very good and very useful," said Robert Trent, also confined to a wheelchair. "But it's going to be dodgy getting a job. People just aren't willing to take the risk."

Simon Watson had actually done clerical work before going on the TOPS course. "We just have to try that bit harder," he said. "Being immobile doesn't help."

Some students have been luckier than others. Glyn Veron, for example, had already completed an Open University degree course and written two books before deciding to study computer programming. Glyn

programmer include the facility to invoke the Dialog processor to handle much of the interaction between the user and the system, thus reducing the amount of Cobol which has to be written in a new application.

There is also a screen format generator which enables programmers and people and users as well, to set up their own screen formats and set their own validation rules. And once these screen formats are stored, they become available to any other application, regardless of the programming language in which it is written.

The features are similar to those on the ICL ME29 (Page Six, April 3), and underline a steady trend towards making programming easier and programmers more productive. Clearly there are benefits, but are the benefits wholly unimpaired from the point of view of the programmer? Page Six would like to hear your views.

But at the same time, the approach will tend to de-skill the role of the existing personnel and although the facility is put over as enabling users of the system to become more productive, this could well be at the expense of making the job more boring.

If people become quick bored with their jobs they become less productive, one might say. The question of whether the approach is of interest to the

person who is not only inexperienced but also physically incapacitated. Will they be able to cope with a full-time job? What about transport? Will any special aids be necessary?

The aim of the courses at Queen Elizabeth College is to equip disabled people with the ability and confidence to occupy a normal job in society. The computer programming course provides intensive training in Cobol, and after the 12 weeks the students have written and run a suite of five programs.

SOFTWARE FILE

Moves to cut Cobol maintenance costs

SOLVFIELD, a small company in Haslemere, Surrey, which specialises in the theory and practice of language transformation, has turned its attention to Cobol maintenance.

Solvfield's director, John Cole, quotes disturbing figures for the amount of time and effort devoted to maintenance, including the conclusion of a Defence Department survey in the US that "if a large Cobol system of 'N' lines is written, the number of source lines that are changed each year is 'N'."

According to Cole, a typical Cobol installation allocates about 80% of programmers' time to maintenance each year. "Only 4% to 5% of maintenance effort is spent on the actual coding," he explained.

"Most of the time is devoted to understanding the style in which the program has been written, and searching for answers to questions about the program itself."

Cole puts a figure of 32% on the time spent sorting out quirks of individual style, which can vary within a program written by a particular programmer as well as with layers of subsequent maintenance.

He believes that the search for

secure information about the program and its environment takes 27% of effort, and the generation of test data, documentation and actual testing accounts for 31%.

Solvfield's new family of products, called Panache, are designed to deal with these complex factors by enforcing programming standards and documentation. First to be released are A-Panache for IBM Assembler, and C-Panache for Ans Cobol, which, according to Cole, can save over 40% of the time spent in Cobol maintenance.

The standard style to be enforced can be tailored to the in-house standards of a particular installation and altered if necessary. C-Panache also generates a set of tables which analyse REDEFINES, OCCURS and NAMES, give a file map of each field, outline the logic flow and the role of each paragraph, and finally provide a breakdown of the testing, setting and using of values.

Solvfield's philosophy is to attack the problem from the top rather than adapting a specific tool to a general purpose. Panache is part of a much wider approach to the practicalities of

computing which draws on academic, almost philosophical disciplines.

The company has won a respectable clientele for its Protran technique of translation and conversion, which copes with data files, programs, and other transformations via a metalanguage, Metal.

Panache comes of the same philosophy, attacking the standards problem at its root rather than piecemeal, but is likely to find itself competing with other documentation aids of different scope such as Byblo, and ADR's Autoflow.

A-Panache costs from £650 upwards, and C-Panache from £1,850 upwards, although prices depend on individual needs. Solvfield can be contacted through Cole at Haslemere (0424) 4444.

DEC speeds up GTS-300 operating system

A MORE powerful version of the GTS-300 operating system for the Digital Equipment Corporation family of small business machines has been announced. DEC claims that Version 6 executes utilities at speeds up to 15 times faster than the previous version and enables program development and debugging to take place at the same time as applications activities.

DEC has also enhanced the DECsystem-20 operating system, offering 23 new facilities in Release 4, including support of PDP-11 based Ramota Job Entry and features to increase productivity.

Improvements in throughput up to 50% are also claimed for the DECsystem-10 mainframe configurations using the new symmetric multiprocessing capability, SMP.

Designed for use with dual DECsystem-10s using KL10 processors, SMP enables both processors to perform computation and input/output functions and is aimed mostly at service bureaux, large databases, laboratories and in-house time sharing installations.

Replacement for UCC Fifteen

THE University Computing Company has released a replacement for its UCC Fifteen operating system software, called UCC Eleven. It is an automated job re-run and tracking system which supplies data on re-runs under OS Consoles, TSO, CICS, Roscoe and Jee.

Pascal for computer students

A JOINT software development project by Hull University and Heriot Watt University has given rise to a new Pascal compiler which is being developed for university and polytechnic computer students.

Supported under the Vulcan operating system, the compiler will be available in the form of a tape with the Harris 100, 800 and 900 series of digital microcomputers.

Pansophic devolves marketing

THE US software firm Pansophic, which markets its products Easytrieve and Panvelat worldwide, is introducing "devolution" of its European operations and setting up new headquarters in Western Avenue, London.

The move reflects a general trend among companies with international interests to hand over selling to "home grown" staff. Pansophic's reorganisation is reflected both in the decentralisation at a local level, allowing more autonomy to European subsidiaries, and in the central management, which has become multinational.

London was chosen for the new European base to avoid language problems, and because it provides attractive facilities, as well as a cheap support staff than in The Hague, where the company previously managed European sales.

The company has initiated a recruiting drive, and completed its first sales training course.

Weethouse says FDR already covers 80% of the UK

Automatic back-up in FDR option

AN OPTION to Westinghouse Management Systems' widely used Fast Dump Restore, FDR, that will allow users to automate back-up procedures based on the last reference data of a dataset, is expected at the end of the year.

Called ABR, the option also simplifies housekeeping, freeing disc space by making an automatic back-up, scrubbing and uncataloguing datasets that have not been referenced in a specified number of days.

It also restores them from the archives as necessary, and reports on the status of datasets on back-up or archive tapes.

The company recently made an agreement with Gulf International Consultancy Centre to sell Westinghouse software products in the Middle East, including FDR and its data compression utility Compactor.

Weethouse says FDR already covers 80% of the UK

market for IBM and compatible mainframes running under OS operating system including MVS, SVS, VSI and VS2.

Like FDR and Compactor, ABR is a product of Innovation Data Processing in the US. Westinghouse will be pursuing the policy of undercutting competitors, selling the product for about £4,000 to those already using FDR.

For IBM users

AMDAHL software, previously provided only to sites using the AMDahl 470, is to be made available to users of IBM 370/303X hardware. The first product to be offered is VM/Performance Enhancement which is designed to reduce system overhead for IBM Multiple Virtual Storage and Single Virtual Storage operating systems, when either runs concurrently with IBM VM/370.

From Kodak a laser printer

A laser printer with a print-out speed equal to the best available today but at a third of the capital cost has got to be good news.

And when it slashes running costs by up to seven times - can you afford not to investigate further?

The KODAK 'Komstar' Microimage Processor, Model 200 is an on-line laser printer which writes data on to microfilm at a cost of about 62p per 1000 pages. Comparable paper print-out could cost £4.00.

To find out more, just fill in the coupon or ring Roger Highmoor on Hemel Hempstead (0442) 61122, extension 214.

Trend towards making programming easier

FOLLOWING the trend towards easier-to-use software, Univac has introduced a new Dialog processor with its System 80 small computer, which raises some interesting questions about the DP department's attitude towards the end user.

The System 80 is the successor to Univac's 90/25, 90/30 and 90/40 machines, and a key feature of the Dialog processor is that it enables users to add new interfaces to their existing 90-series programs.

For example, it is possible to take an existing data entry program and add a question-and-answer session as a sort of "front-end" to guide the operator through the program, simplifying the data and parameter inputs.

The question this raises is whether DP departments will think it worth taking these risks and testing programs and actually adding facilities to make them easier to use. An argument for it would clearly be that as it becomes harder to get skilled clerical staff, it is necessary to make computer systems easier to use.

But at the same time, the approach will tend to de-skill the role of the existing personnel and although the facility is put over as enabling users of the system to become more productive, this could well be at the expense of making the job more boring.

If people become quick bored with their jobs they become less productive, one might say. The question of whether the approach is of interest to the

person who is not only inexperienced but also physically incapacitated. Will they be able to cope with a full-time job? What about transport? Will any special aids be necessary?

ADDS VALUE

ADDS VALUE means more reliability, more adaptability and a host of valuable standard features and modules including:

- 40 Lines 25 Plus extra visual display facilities - capable of simple business graphics
- 25 As the 20 but with a separate numeric entry pad
- Same as 40 but with magnetic paper of modified data frame

PEOPLE and EVENTS

Trier new president of EEA

DR Peter Trier has been elected president of the Electronic Engineering Association and chairman of council for 1980/81. He succeeds John Sutherland of Marconi Radar.

Trier is a director of Philips Industries, London, the Philips parent company in the UK. He was chairman of the Electronics Research Council from 1976 to 1980, and is a member of the Defence Scientific Advisory Council and a former chairman of its Maritime Warfare Advisory Board. He also serves on several other national scientific councils and committees.

He is a former vice-president of the IEE, and a former chairman of

council of Brunel University. He is vice-president of the Institute of Mathematics. He holds an honorary doctorate of technology (Brunel 1978), was elected into the Fellowship of Engineering in 1970, and appointed a CBE in 1980.

Silver medal for Scicon director

PROFESSOR Martin Seale has been awarded the silver medal of the Operational Research Society. It is the Society's highest award, and is presented only infrequently.

Seale is technical director of Scicon Computer Services and holds a visiting professorship at Imperial College, London. He is a Fellow of the Royal Society.

Nigel Davies has been appointed manager of the Slough branch of Burroughs. He was previously a promotion manager at Burroughs head office and prior to that zone manager at the company's Luton branch. Manager of Burroughs' Finchley branch is Colin Pryce, formerly promotion manager at head office.

Jim Todd has become director in charge of the P-E Consulting Group's activity in the fields of production and inventory control.

Steve Smith has become vice-president of business planning for Amstat at its headquarters in Sunnyvale, California. Ed Thompson and Ernie Thompson, both executive officers with the company, have been designated vice-presidents.

ICL chief in America

THERE has been another change at the top of ICL's US company. RICHARD BRIGHT, who has been president of the operation in October 1978, has left, and his place has been taken by THOMAS WOODHILL, head of the Canadian company, who will for the time being be responsible for both subsidiaries. Both he and Bright joined ICL when it acquired the international operation of Singer Business Machines.

IDPM chairman

CHAIRMAN of the West London Oxford branch of the Institute of Data Processing Management is now Colin Bendall of SIS Applied Systems, succeeding Chris Nunn of Marks and Spencer.

Marcus Tuck of Rank Xerox, Ian Jones of LMR Computer Services, and Don Morgan of Express Data have been elected to the committee.

Fleet on BETA

CHAIRMAN and managing director of NCR, Rex Foot, has become a member of the council of BETA, the Business Equipment Trade Association. The association represents the interests in the UK of manufacturers of sole concessionaires of all types of business machines and systems, computers and peripherals and office furniture.

The presentation was made by George Mitchell, president of the Society, at the Royal Society in London, on the occasion of the Blackett Memorial Lecture which Seale delivered. The subject was Operational research and computers — a personal view, and the lecture reviewed developments of computerised OR over the past decade, particularly in optimisation methodology.

Robert Young has become the London branch manager of Dan-sophic Systems. He was previously managing director of Computer Associates (UK).

John Withers has become national sales manager for the computer and machine moving division of Giltspur's Transport Services. Formerly a Royal Navy officer, in recent years he has worked in sales with International Acrodio and Bryans Southern Instruments.

Evelyn Berezin has been appointed director of long range planning of office systems for Burroughs. Berezin was a founder and president of Redaction Corp when the company became a Burroughs subsidiary in 1978. She subsequently served as director of planning for the office products group and on the corporate product management staff as director of office automation products.

Vernard Sean has been named vice-president of field engineering, a new corporate management position, with NCR. He was formerly vice-president of the components and support division in the engineering and manufacturing group of the company. He will have responsibility for all field engineering operations.

Dr John Bass, managing director of Plessey's Allen Clark Research Centre, has also been appointed to the new position of director of research.

Princess Margaret inspected ICL's 7700 word processing system on the ICL stand at the British Hospital and Medical Exhibition at Olympia. She was conducted round the ICL exhibit by the company's chairman, Phil Chappell, who is on her right in the picture.

Durkin to be the next IEE president

PRESIDENT of the Institution of Electrical Engineers for the year 1980/81 will be Air Marshal Sir Herbert Durkin. He will take up his honorary office in October.

Sir Herbert has held the positions of vice-president of the IEE in 1977, and deputy president in 1978. His RAF career included periods as director of engineering policy at the MoD, Air Officer Commanding 90

(Signals) Group, director-general of engineering and supply management at the MoD and controller of engineering and supply (RAF). He was awarded the CBE in 1976.

He is chairman of the board of Exploration Computing, which offers specialist and consultancy services to the mineral exploration business, particularly in oil.

Head of National Engineering Lab

DIRECTOR of the National Engineering Laboratory is to be Paul Freeman, who has been director of the Computer-Aided Design Centre at Cambridge for the past three years. He replaces Dennis Mallinson, who retires in July.

Peter Brann has been appointed general manager of the business forms division of Kenrick and Jafferson, printers of the computer industry. He previously worked as general manager of the light machines division with Brush Electrical Engineering.

Leigh Collier has left Gemini to join the management consultancy division of chartered accountants Hays Allen, as a consultant.

David Lee has joined AM Jacquard Systems as European marketing manager. He previously worked for IBM for 18 years.

Udo Lichtenacker has been appointed European operations manager for the electronic devices division of Rockwell International. He was previously central region manager of General Instruments microelectronics division.

Frank Woodgate has become UK sales manager for Atlantic Computer. Previously he was regional manager with Standard Chartered Leasing.

Don Devine of Datasab has been appointed manager of financial personal systems, and Ian Wright has joined the company as UK software manager.

John Farnell has left CTL, where he was UK sales manager, to take up a similar position with Allied Business Systems. Software manager Elizabeth East has been appointed manager of research and development with Allied Business Systems.

Dr Andrew McLean has become software development manager with Videcom. Previously he was a microprocessor software engineer with Plessey Microsystems.

Real time Pascal a threat to assembler

A REAL time Pascal compiler, claimed to be only 50% less efficient than an assembler and to be three to four times faster than Fortran in real time applications, is on offer from Dietz for use with its minicomputers.

The small West German minicomputer calls its new compiler System Pascal and claims that it compiles at a rate of 50 statements per second and reduces development time three or four-fold compared with assembler.

The compiler is the third generation of Dietz Pascal. The first was Pascal-E in 1977, a simplified version designed for people learning the language. Full Pascal followed in 1979 with the real time extensions being added this year.

Although spawned by Algol and originally used mostly for technical applications, Pascal is now widely used for writing systems software and is increasingly being adopted for all applications.

Among its attractions are that it is comparatively easy to write and that programs written in it are easy to maintain because one programmer's work can be

fairly easily understood by another. Because it is block structured, unlike with Cobol, single changes do not require extensive related adjustments throughout the program.

The Dietz minicomputer line currently consists of the 621M, which is a low cost AMD 2901 bit-slice version of the processor, and 621X1, 2 and 3 processors, all of which are different.

The latter three are to be replaced with a single new TTL processor; emitter-coupled logic was rejected on the grounds that in harsh environments the voltage swings needed to switch ECL are so small that voltage spikes could cause problems.

In the year to December 1979, Dietz maintained its profit margins, turnover grew about 15% to DM 55 million (£13.3 million) and orders were up a healthy 25%.

Languages available on the Dietz minis include Basic, C-Basic, Basicx (an experimental real time Basic), Fortran IV, real-time Fortran, Pearl, the three versions of Pascal and Ansl Cobol. There are also an assembler and a macro-assembler.

BRS dating service for road hauliers launched

A REAL time system that could help to reduce the number of empty lorries in the UK by 3.5% and save 10 million gallons of fuel, has been developed by Tempo Computer Services for British Road Services.

Called Datafreight, the system stores data about loads requiring delivery and their location, with details of suitable available vehicles.

Over 30 BRS depots are currently linked via Post Office lines to a system 8700 computer at Input, and each depot is able to input data via a video terminal

that then becomes available to other depots. The system allows for online amendments and updates as well as hard copy print-outs.

Datafreight is set limited to BRS and private owners can join for a fee of £75 plus £50 per lorry annually.

Tempo also grouped BRS depots into areas based on postal codes and provided training for both BRS staff and their customers. Work started on the system in February 1978. It was developed using RPL11.

303X boost to delay IBM's H-series

From front page

channels, but the new 3042 supports up to 12 channels of its own for a total maximum of 28 channels on a 3033AP system.

The new release of MVS, called MVS/System Product Job Entry Subsystem 2 and 3, MVS/SP-2/3, are designed to improve system and storage management, for example allowing direct communication between memory address spaces without the use of common virtual storage space.

With a data transfer rate of three megabytes per second, a capacity of 2,520 megabytes per dual spindle module and support only by MVS, the 3380 disc drive was clearly designed by IBM for the forthcoming H-series in which it is more than twice the capacity of the 3370 units for four times the cost.

For users of 303X and 370/168 and 168 machines two new versions of the 3380 controller will be available. The 3380 Model 2 will have two different storage directors, one for supporting existing 3330, 3340 and 3350 drives and the second for handling the 3380. Both storage directors on the 3380 Model 3 will only handle the 3380.

But directors for the 3380 will need the special speed matching buffer for reducing the data transfer rate to 1.5 megabytes

303X users only will be a new data streaming feature costing about £22,000 that will be able to speed up block multiplexer channels on a 303X CPU to three megabytes a second.

Plug compatible manufacturer Memorex believes that, for the H-series, IBM will introduce a modified version of the 3380 currently codenamed McKinley that will employ fixed block recording as opposed to the variable length or code key data recording used on the 3350 just announced. McKinley will also come with four head actuators instead of two to reduce contention. A version of the 3380 controller with a solid state cache and a dedicated tape drive for fast dump/restores is also expected with the H-series.

The other disc drive announced, the 3375, differs from the 3370 introduced with the 4300 series last year in employing code key data rather than fixed block recording. This difference probably accounts for the increase in storage capacity from the 3370's 570 bytes per spindle to 819 megabytes. IBM says that first deliveries of the 3375 will start in October 1981.

Up to four 3380s make up a string; head of string A Model 3380 £81,142 or £77,505 with additional head-head fees of £354 while the B Model costs £65,354 with £140 per head head fee.

IBM edges ahead in Japan

LATEST market share figures from Japan show IBM edging forward again with 30.7%, up from about 28% last time figures were given. Fujitsu with 23.3% and Hitachi with 16.5% are also gaining market share, while Unisys is surprisingly strong with 10.3%.

Hitachi Electric is stable with 9.5%, next comes Burroughs with 3.5%, while Toshiba at 2.2% is in decline. NCR has 2.2%, while the other two Japanese mainframes, Mitsubishi and Old have almost dropped out of the list with 0.7% and 0.2% respectively.

Aggregating the figures of the top three companies suggests that the IBM share of the Japanese market is 30.7%, next comes Burroughs with 3.5%, while Toshiba at 2.2% is in decline. NCR has 2.2%, while the other two Japanese mainframes, Mitsubishi and Old have almost dropped out of the list with 0.7% and 0.2% respectively.

PPS installed

A PAGE Printing System from Honeywell has been installed by Audite of Great Britain. The 8,000 lpm system cost £148,000 and will be used for producing market research and consumer panel reports.

Services lead revival in fortunes of UK computer industry

THE latest set of statistics from the Department of Industry on the UK computer industry show a big drop in total sales of computer equipment between the fourth quarter of 1979 and the first quarter of 1980, while services grew by 30%.

Sales fell from £310 million to £284 million, and exports by UK manufacturers dropped from £228 million in the fourth quarter of 1979 to £213 million in the first quarter of 1980. But exports were substantially higher than in the first quarter of 1979 when the figure was £165 million.

Imports of computer equipment increased for less rapidly over the same 12 month period, from £248 million to £277 million.

The longer term performance of the UK industry indicates a significant growth in revenues, the overall sales figure for 1979 being £1,103 million, a very healthy 26% increase over 1978. Exports grew by an even more impressive 32% to reach a total of £834 million last year.

The UK computer services industry grew substantially during 1979 according to the latest Department of Industry statistics. The total value of business increased by about 30% — from £332 million in 1978 to £430 million last year.

Work done by computer services firms for their parent or associate companies increased by a relatively sluggish 21% to £109 million, but business with outside clients in the UK and overseas increased much more rapidly.

Total outside sales in 1979 were £28 million overseas, £51 million with public service clients in the UK and £240 million with other UK clients.

\$16m project

AS part of a \$90 million US Navy project, Hughes Aircraft of California has been awarded a \$16 million contract to supply eight of its AN/UVA-4 display consoles for use in guided missile fast frigates.

Choosing a computer is a question of philosophy

When it comes to the crunch it's all a question of need versus cost. Of course the easiest way is to buy a suit that's too big and then grow into it. Unfortunately it's also the most expensive way. And you always run the risk that it won't fit you properly, now or later.

This is where our philosophy comes in. A NORD computer system sets no fixed limits. It becomes what you yourself make of it. A system of hardware and software modules which can be rearranged or added to when your needs change, regardless of your initial configuration or your application.

What today is a simple system for order processing or stock accounting can be extended tomorrow to become a complex system for distributed data processing or production control. You need never take a step backwards. The equipment and programs you build up, you keep. You just add to them.

BE SURE YOU'RE COVERED

Only with Rapid Recall

IBM 303X and 370/168 and 168 machines two new versions of the 3380 controller will be available. The 3380 Model 2 will have two different storage directors, one for supporting existing 3330, 3340 and 3350 drives and the second for handling the 3380. Both storage directors on the 3380 Model 3 will only handle the 3380.

But directors for the 3380 will need the special speed matching buffer for reducing the data transfer rate to 1.5 megabytes

MICRO NEWS

Intel plans its next generation

THE key issue of this era is the silicon system and the next generation is likely to be extremely innovative in systems technology. No longer is it the case of programmers writing software to support hardware but during the last few years it has become increasingly apparent that engineers are designing hardware to support the software.

These opinions were aired by Dr. Chiffon Crook, managing director of Rank Precision Industries, at this year's Semtex held at Imperial College. Now they appear to be holding true—Intel has announced its Micro-system 80.

Intel has combined its announcements for the future, previously called "Operation Crusade", with a renumbering of its existing chips and systems. The result, Micro-system 80, projects a hierarchy comprising five levels of functionality from 8-bit to 32-bit.

In order of decreasing levels of systems integration they are: A 32-bit micromainframe called IAPX 432 and previously referred to as the 8800 (CW, March 8); a 10/32-bit micromini called IAPX 286; two 18-bit microminis called IAPX 188 and IAPX 86; three 8/16-bit microcomputers called IAPX 88, MCS-85 and MCS-80; and two 8-bit microcontrollers called MCS-51 and MCS-48.

The micromainframe is Intel's

solution to the distributed processing problem and is said to have the power of an IBM System 38. It is described by Intel as "a 32-bit microsystem offering mainframe functionality and performance within a micro-computer form factor."

The 432 is said to open a technological concept, that of hardware and software integration within a package which displays system characteristics. It is an object oriented machine which, according to Tom Lawrence, Intel's vice-president for Europe, means that the data set is at a higher level than the bit or byte definition.

"An object is a data set which could be a microprocessor itself or a memory management unit," says Lawrence.

System operation is based around a modular software structure. The system commands its internal structure to define an object like a file management system or a floating point arithmetic logic unit and any module within the system can take on that object.

Programming has been made simpler by the use of Intel's own systems implementation language, SIL, which is register independent. Other languages are to be supported, but the only one announced so far is Pascal.

More details of the 432, and the rest of Microsystem 80 are to be announced at the Intel Fair on June 24. Meanwhile it is

thought that the system will have an extensive addressing range of 4,000 megabytes (2³²) which will support from 256K to 8 megabytes. Intel hopes to provide limited quantities of the 432 towards the end of the year.

Lawrence defined the micro-mainframe as a 18-bit system with increased functional capability. It involves advanced integration of hardware and software so that the system possesses its own DMA channel and the kernel of an operating system. The micromini is a 18-bit system without functional integration, but with co-processor operation.

The IAPX 286 basic comprises a CPU, an I/O processor, a numeric processor extension and operating system firmware. From this a complete family of 286/xx systems evolve with differing combinations of the four basic units. They all use ASM and PLM system languages and Pascal and Fortran applications languages.

The IAPX 188 appears to be an enhanced extension of the 86 and 88 systems and is code compatible with them for certain applications such as personal computers, word processors, intelligent terminals and controllers. It also has operating system firmware support.

Three units comprise the IAPX 86: the 8086 general data processor; the 8089 I/O processor; and the 8087 numeric processor extension. Again, all

LAWRENCE... An object is a data set which could be a microprocessor itself or a memory management unit.

combinations of these constitute the 88/xx family, and likewise with the IAPX 86. Key architectural features of both families include one megabyte address space, co-processor extensions, 18-bit internal data path and hardware multiply and divide.

Both micromini systems, IAPX 188 and IAPX 88 use ASM and PLM 88 system languages and Pascal and Fortran applications languages. The microcomputers, including the IAPX 88, use ASM 80 and PLM 80 system languages and four applications languages, Pascal 80, Fortran 80, Cobol 80 and Basic 80.

Meanwhile, Intel has plans for Europe. A 13-acre site with a 100,000 sq ft building, in Swindon, Wiltshire, is to become the UK headquarters. According to Lawrence, major activities will be carried out there including sales, support and development. The company is also interested in setting up a plant in Eire. Announcements will be made on July 14, Bastille Day, on whether Intel will be venturing in France with Matre-Harris.

Intel will be venturing in France with Matre-Harris.

Intelligent peripheral controller first in latest range of 68000 devices

DETAILS of more devices in the 68000 family have been announced by Motorola and are expected to be available over the next two years.

An intelligent peripheral controller, called the MC 88120 and due for sampling in autumn, will be the first available. It has a 6801 8/16-bit processor on board, an enlarged instruction set, 2K-bytes of ROM, 21 I/O lines, a serial communications interface, 128 bytes of RAM and a 18-bit counter. A typical application is an asynchronous printer controller.

Also due for sampling in the autumn are the MC 88122 terminal node controller for supporting peripherals and the MC 88340 error detection and correction chip. The 68540 will carry out double bit error detection in 18-bit data and can be cascaded for 32-bit data.

Due for sampling in April 1981 is the 68451 memory management unit which will support virtual memory and real memory up to 18 megabytes, and perform address translation. Samples of the 68230 parallel interface timer are expected in summer, 1981. This will handle I/O interrupts and generate synchronous pulses.

A direct memory access controller is planned for sampling in summer, 1981. Designated MC 68450, it is built around the 68000 and will have a transfer rate of 4 megabytes/second. Hitachi is developing it in a technology agreement with Motorola.

Two other chips are expected to be sampled in 1981. The first, 68581, is a communications controller which will handle SGLC, HGLC, bisync and X25 communications protocols. The second, 88341, is a ROM programmed for floating point operation.

Motorola is considering the development of four other peripheral chips including double port RAM, the 88340, a bubble memory controller, the 88453 (which Rockwell will develop under its agreement with the company), a direct memory access processor in the 68640 series, and disc controller, the 88454.

Motorola is delivering the US 4MHz versions of the 68000, but 8MHz versions are expected in the autumn.

1980 edition of IC Master

THE 1980 edition of the IC Master was introduced at this year's All Electronics Show. It costs £52.50 from Patec Steadman and Partners, 34 High Street, Saffron Walden, Essex.

New shop opens

PET dealer DeVinol Computer has expanded into new shop premises at 85 Edgware High Street, Middx. Tel: 01-852 0626.

ICL plans to boost its US turnover tenfold

BEHIND ICL's radical reorganisation of its US business (CW, January 31) lies an ambitious plan to boost turnover there from its present meagre \$18 million to about \$200 million in five years.

Main thrust of the market drive continues to be the products inherited from Singer and developed further by ICL, notably the 9500 point-of-sale terminal, which has scored an order for between 400 and 500 terminals with 40 System Ten controllers from an unnamed US cus-

tomers.

The new System Ten 120 was launched with different peripherals in the US as the System Ten 320, and the company is now selling these products, and the 1500 terminal computer, from its new distributive systems division based at Irving, near Dallas, Texas.

Headquarters of its sales operations for native ICL products is now Falls Church, Virginia, close to Washington. The advanced systems division is selling the

2950s and 2956s in existing customers who have upgraded their 2903/4 machines and want to run the DME/2 emulator, and large 2900s with the back-end Distributed Array Processor. Target market for these is the oil industry, research establishments and colleges, and bodies doing image processing.

The 2903/4 machines have been sold for about five years in the New York area, and along the Boston-Washington "corridor". Installations, including a couple of

customers who have upgraded to 2950s, still only number about 20. Over 30 have been sold in Canada.

The ME29 replacement for the 2903 series was launched in New York last week and has been introduced in Canada.

A third division, customer service, remains at the former ICL Inc headquarters at East Brunswick, New Jersey. It will be responsible for maintenance and service on all products sold by both marketing divisions.

'Data and voice networks will develop separately'

—US PROFESSOR TELLS INFOTECH SEMINAR

DATA networks will develop separately from voice networks in the Eighties and will use satellites almost exclusively. Voice networks will make little use of satellites, even though users can quickly adjust to the worst feature of satellite voice links — the quarter-second delay.

These are the views of Dr Norman Abramson, of the University of Hawaii, who conducted an Infotech seminar in

London on Satellite Data Communications.

His opinion on the separate development of the two types of network echoes that of Donald Davies, of the National Physical Laboratory, expressed at a conference last year, but it flies in the face of British Telecom's plans for the integrated services

digital network based on System X.

The separation was particularly likely to happen in Europe, Abramson said, because the difficulties of sending data via voice lines were greater than in the US. British Telecom is known to be taking a close interest in satellites, but it expects their operation to be a PTT monopoly throughout Europe.

Abramson said the evidence to support his assertion could be seen in the number of satellite data networks planned in the US: SBS by IBM and partners, Xten by Xerox, SDX by Continental Telephone, and Dynac by Digital Computer Corp.

GTE Teletel planned to use satellites in its existing packet network by 1982, and every major US data network operator

was planning to use satellites. The rationale behind the heavy use of satellites lay in two main factors. One was the "connectivity" provided by a satellite network: any station could call any other station directly, without complex hop-by-hop connection paths.

The other was that costs were falling so rapidly that satellite capacity now cost only \$400 a year per channel, which could be virtually ignored. Ground stations, too, had fallen from \$3 million for a system based on a 30 metre dish antenna in 1965 to \$37,000 for a five metre dish-based system in Alaska in 1976. This was also the price at which Texas department store Nieman Marcus had last Christmas entered a receive-only ground station in its mail order catalogue.

Many amateurs, however, were now receiving over 40 television channels from the cable television companies' distribution system on ground stations costing from \$15,000 to only \$2,000.

Ground stations in use with US domestic satellite systems had grown from 800 in 1976 to 2,000 last year, and 4,000 were expected to be in use by December. Holiday Inn alone were planning to install 200 a year for several years.

Turnover 10% ahead of plan at Univac

WITH turnover 10% ahead of plan and orders 20% up, Univac's UK subsidiary closed its books on a satisfactory year which ended March 31.

Previewing the results, managing director Bill Read reported that the 110,749-bit/min mainframe had been particularly successful, with 15 orders in the UK, 76 in Europe, and 224 worldwide.

The 1100 series, which consists of two current models, the 1100/80 and 1100/60, now accounts for two-thirds of Univac's business worldwide.

The other big seller for Univac in the past year had been the V77 minicomputer, which now accounts for 10% of its UK business. For 1980-81, the company plans to increase the growth rate of the minicomputer operations even further.

A major change is that sales of V77 minis to OEM systems builders for packaging as business systems is being handled by a new general services operation, GSC, which will also take in the 38C/77 office computer, previously marketed by a dedicated sales force, and data entry systems.

For the financial year, Univac UK has set itself an overall target of 30% growth in orders and 25% growth in turnover.

Warning to West End shops

SHOPS in the West End of London have been warned that they could be breaking the Trade Descriptions Act by selling the Florida-made Bridge Challenger, an electronic card-playing game (CW, January 17).

The warning has come from Westminster Council trading standards office, which felt the £300 machine's advertising exaggerated its playing ability. The importer, Computer Games of Barking, is reconsidering the wording of its brochures.

Racal-Milgo first UK plant

THE first UK manufacturing plant for Racal-Milgo has been opened at a former Racal Communications plant at Chesford Grange, Warrington. The plant will employ, and probably add, the 130 staff, and will build modems and add-on printed circuit boards.

Are you sure what's going on under the D.P. surface?

Sometimes you have a suspicion that things are not as they appear on the surface, but can't put your finger on the reason. With Computer Operations at the hub of your data processing activity, everything that occurs there can reflect significantly on your D.P. unit and even your Company. However, it can be difficult for you to take a detached view and be totally objective about the impression you create.

Dataskil can help.

Or perhaps you are in the throes of changing from one mainframe to another. Technical expertise, resources and organisation can come under strain, and users suffer.

Dataskil can help.

Or you're awaiting delivery of a new machine. Or trying to solve problems of staffing and procedures.

Dataskil Operations Services can help here too. We can conduct a survey of your operations activity, tailored to your exact needs. We can advise and help on resource control, organisation and staffing levels; salaries and recruitment; define standards; develop procedures; implement projects. And we can provide operations staff at all levels.

Take a fresh look — through our eyes.

Please return this coupon with your letter heading to South & West — Mike Windsor or Jeff Brooks, Dataskil Ltd., Reading Bridge House, Reading, Berkshire (Tel: Reading (0734) 581258). Midlands & North — Laurence Hobday, Dataskil Ltd., St. Ann's House, Alderley Rd., Wilmslow, Cheshire (Tel: Wilmslow (0925) 332631). Please arrange an initial discussion without commitment. Please send your brochure. Please arrange a free one day operations appraisal.

Dataskil Ltd
The Computer Professionals

Question their judgement.

All Ventek computer users were once in the same predicament as yourself.

You have defined the need for a computer system for your company. What it needs to do. How it needs to do it. You're now at the next step.

Amassing a pile of information on computer systems. Checking hardware against hardware, claimed capabilities against actual capabilities. Seeing salesman after salesman. Comparing software costs, installation time, delivery dates.

Putting reputations and careers on the line. All to make the best possible decision in buying a computer system to help in the future profitability of your company.

Discover a Shared Aim.

Ventek Computers would like you to meet Ventek Computer Users, so that you can quiz them on their purchasing decisions. Discover what the computer competition is all about. And most importantly, why there are 1800 installations in the

U.K., including some of the biggest names in industry, and why they went with Ventek.

This is not the time or the place. Ventek Computer systems cannot be adequately described in an advertisement. Nor can any responsible business person decide on a computer system from a single leaflet or a quick briefing by a salesman.

So take this opportunity to see for yourself why Ventek Computers fit into so many organisations with so much competence and so little fuss.

An open invitation to discover our reputation.

Take a step now to lessen the uncertainty of one of the most important buying decisions a company can ever take. Attach the coupon below to your card or letterhead and one of our highly experienced computer sales people will contact you; to arrange a business meeting with Ventek Users.

T-85 'just below power of Sigma 9'

THE Telefile T-85 plug-compatible replacement for the Xerox Sigma 9 has at last been unveiled. The company has also introduced its emulator for the Lockheed MAC minicomputer, which it calls the TCP-16/5, but its other emulation project, a replacement for the 24-bit GE 400, has been put on ice.

The T-85 is claimed to be just below the power of the Sigma 9, and two further models, a T-81 and a T-87, are planned.

Xerox introduced a multi-processor version of the CP-V operating system just before it pulled out of the computer business. The operating system is capable of running up to four processors, and Telefile has developed an enhanced interrupt scheduler which makes multi-processing configurations much more efficient; its target is an increase throughput by 80% with the addition of a second processor.

The first Telefile release of the software is to be called GOO,

and features a "red overflow" facility which gets round the problem that when a fixed head disc overloads, the system crashes. Instead, the system starts writing to a moving head disc.

Telefile is offering the new release, set for July 1, to existing Xerox users as well as customers for its T-85, and will be charging a licence fee for it. Up-to-date Cobol and Fortran have been added, and Telefile hopes to pick up a Pascal compiler developed at the University of Montreal.

The company has nine orders from the existing base so far, and in the UK Atkins Computing, now owned by On-Line Systems, and a long-time Xerox user, is keen to have a new machine.

Telefile hopes to win users for its T-85 from outside the Xerox base and is targeting the whole of the educational, time sharing and scientific markets. Enhancements planned include the addition of special back-end processors for things like fast For-

tran execution.

Reasons for doing the Lockheed MAC emulation is that the company originally adapted the mini for use as a front-end processor for IBM 360 mainframes. Lockheed then dropped it after introducing the incompatible Sue mini. Telefile now offers the MAC emulation as a front-end for Sigmas and the T-85.

Both the T-85 and the TCP-16/5 use the AMD 2901 bit-slice microprocessor, eight in the T-85 CPU and four in the 16/5.

Amdahl software for IBM users

PROPRIETARY software, such as the MVS/SE Asist for 370/188 systems, is to be offered to IBM users by Amdahl (CW, June 29, 1979).

MVS/SE Asist is not yet included in the programme, which so far involves only the VM Performance Enhancement, VM/PE, and begins in the US in July. VM/PE enables a copy of

Japan's big slice of US market

UNDERLINING the trends being made by Japan into the US computer industry, Tokyo broker Okasan Securities says that Japanese companies have 42% of the US market for 16K RAMs and look set to get 50% of the 64K RAM market.

The brokers also say that world semiconductor production in 1979 amounted to \$10,500 million, with \$7,035 million coming from the US, \$2,310 million from Japan and \$1,155 million from Europe. In 1980, the total was \$8 billion, with \$2.5 billion coming from the US, \$2.3 billion from Japan and \$3.2 billion from the rest of the world.

Pertec will stay independent—Poppa

"AS a result of our acquisition by Triumph-Adler, we will be spending \$2.8 million more than we would otherwise have done this year on research and development, and \$5.2 million more on marketing."

This was the enthusiastic view of Ryal Poppa, founder and head of Pertec Computer Corp., acquired last year by Triumph-Adler using money from its ultimate parent, Volkswagen.

"Some European acquisitions have gone badly," he commented, naming names, but making it clear that Triumph-Adler-Pertec was to be the exception. "The independence of Pertec will be preserved; there had been no backbiting and no jockeying for position."

The future of the combined company would be in office automatically.

"We do not yet have the communications and switching technology, but we will either gain it through a joint venture or develop it ourselves. If you put Volkswagen, Triumph-Adler and Pertec together you are talking about a \$18,000 million company, which means that we are big enough to go into the semiconductor business in our own right. I'm not saying that we shall, but we can if we need to. And people may say that that \$18,000 million is overwhelming Volkswagen—all these little Beateles running about—but we will do a combined \$1,000 million in data processing this year."

Poppa revealed that Partec plans to launch the new TA 1830 business computer in the US in

German Prestel available on ICL

THE availability of Prestel-compatible database software on the ICL ME29 replacement for the 2803 should get the new machine off to a flying start in the West German market.

The test trial of Bildschirmtex, the German version of the British Post Office's Prestel videodata system, is due to begin in Düsseldorf this month, and the Germans plan one

significant difference in the way it operates.

Initially, information providers will store their data on GEC 4000 series computers run by the West German PTT, but any information provider with compatible software on his machine will be allowed to own and operate his own computer attached to the Bildschirmtex network.

So far ICL is the only company able to offer this software on its computer in Germany.

In the experiment, which will be followed by another in Berlin starting later in the year, 1,000 information providers will serve 2,000 domestic subscribers who have been carefully chosen to be a representative mix of the West German population. There will also be 1,000 business users, organised into closed user groups.

German manufacturers seem to have taken to Bildschirmtex with more enthusiasm than their UK counterparts: six companies are now offering editing terminals for information providers, and 16 companies are producing adapted television sets or terminals for the system.

Among the companies exhibiting Bildschirmtex equipment at Hannover was Siemens, with an editing terminal which supports a reader for pictorial information. A picture or graphic is scanned in 30 seconds and the digitised information is either transmitted or stored.

The Alphatronic la built around the same Intel 8085 micro as the company's new US acquisition, Pertec's PCC 2000 personal and small business computer. Designed by SKS of Karlsruhe and now manufactured by Triumph-Adler, the Alphatronic comes in four versions, two for the educational market and two for professionals. Languages supported are Basic and Pascal. It comes with keyboard and display and is offered with several Triumph-Adler printers including a galball and a rotational thermal

printer which prints at 2,000 cpi on a standard paper.

The PCC 2000 from Pertec features Basic, Cobol and Fortran, and is at the top end of the personal computer market, fulfilling the \$15,000 to \$20,000 price bracket.

Principal operating system on the PCC 2000 is Pertec's MTX, and the company introduced at NCC in Anaheim a new business package called Magic, Managerial Accounting for Generalised Information Control, which includes eight modules: order processing, invoicing, accounts receivable, sales analysis, inventory management, accounts payable, payroll and general ledger.

The package is written in Basic and Pascal. In the US it will carry an initial licence fee of \$2,000 and \$1,500 per copy thereafter.

DM2 million order for Alphatronic system

A MAJOR success has already been scored by the Triumph-Adler Alphatronic personal computer, with a DM 2 million German Post Office order for up to 300 units. The machines are to be used as standalone information systems on client telephone orders.

The Alphatronic la built around the same Intel 8085 micro as the company's new US acquisition, Pertec's PCC 2000 personal and small business computer. Designed by SKS of Karlsruhe and now manufactured by Triumph-Adler, the Alphatronic comes in four versions, two for the educational market and two for professionals. Languages supported are Basic and Pascal. It comes with keyboard and display and is offered with several Triumph-Adler printers including a galball and a rotational thermal

printer which prints at 2,000 cpi on a standard paper.

The PCC 2000 from Pertec features Basic, Cobol and Fortran, and is at the top end of the personal computer market, fulfilling the \$15,000 to \$20,000 price bracket.

Principal operating system on the PCC 2000 is Pertec's MTX, and the company introduced at NCC in Anaheim a new business package called Magic, Managerial Accounting for Generalised Information Control, which includes eight modules: order processing, invoicing, accounts receivable, sales analysis, inventory management, accounts payable, payroll and general ledger.

The package is written in Basic and Pascal. In the US it will carry an initial licence fee of \$2,000 and \$1,500 per copy thereafter.

The Alphatronic la built around the same Intel 8085 micro as the company's new US acquisition, Pertec's PCC 2000 personal and small business computer. Designed by SKS of Karlsruhe and now manufactured by Triumph-Adler, the Alphatronic comes in four versions, two for the educational market and two for professionals. Languages supported are Basic and Pascal. It comes with keyboard and display and is offered with several Triumph-Adler printers including a galball and a rotational thermal

DM2 million order for Alphatronic system

A MAJOR success has already been scored by the Triumph-Adler Alphatronic personal computer, with a DM 2 million German Post Office order for up to 300 units. The machines are to be used as standalone information systems on client telephone orders.

The Alphatronic la built around the same Intel 8085 micro as the company's new US acquisition, Pertec's PCC 2000 personal and small business computer. Designed by SKS of Karlsruhe and now manufactured by Triumph-Adler, the Alphatronic comes in four versions, two for the educational market and two for professionals. Languages supported are Basic and Pascal. It comes with keyboard and display and is offered with several Triumph-Adler printers including a galball and a rotational thermal

printer which prints at 2,000 cpi on a standard paper.

150 for Nasco Europe

WITH installation of an AS/5000 at VZ Heidelberg, the data centre for the city and local authorities, early in May, National Advanced Systems Corp has achieved its 150th sale in Europe since it started in 1977.

The company says that it has sold more IBM-compatible processors in the past four months than its predecessor Ite achieved in any four-month

period.

The Heidelberg machine is installed alongside an IBM 370/148 and runs under VM and IOS/VSE. It was chosen in competition with IBM, against a 4341 which ran well when lightly loaded but ground down under a realistic workload, according to the customer. IBM then hid a 3031 but the Nasco offering proved substantially cheaper.

AN underground rail network carrying from one to about 50 gravity shafts in the Kilsnash area near Kilsnash, northern Sweden, is controlled by a dual OS104 system from ASEA, the Swedish industrial conglomerate. The system controls the flow of ore via the trains, through a crushing plant to the hoists which take it to the surface. Heart of the system is the control room (above) from which all operations are monitored. The railway is part of an integrated production system installed by ASEA.

YESTERDAY'S branch office

Today's*

Branch office of the future, but available now—that's the Model 745 Portable, from the "Silent 700" series of electronic data terminals. It gives representatives immediate access to computerised data wherever there's a telephone and power point.

Just plug it in, link it to a phone handset and the 745 is ready to send or receive up-to-the-minute data. You can then make instant decisions based on reliable, accurate information.

In your customers' offices, for instance, the 745 can enter sales orders or print out complete reports in seconds on your stock delivery times, prices or detailed quotations.

You can buy the 745 at attractive prices, or use our flexible leasing programme. And you can depend on responsive support from TI's national sales force, with additional back-up from its distributor or TI Supply, to handle small quantity immediate deliveries.

The 745 means change—to greater efficiency and profit. Learn more. Call your nearest TI Supply office for information.

And we mean today. The 745 is available immediately from TI Supply. Call us at:

Bar coding boosts use of PoS kit

by Nicholas Benwell

COMPUTERS, as far as the observant consumer is concerned, crop up in a variety of different ways nowadays. Take one of the most elaborate examples: Prestel. In some of its files, Prestel offers perhaps the most stylish form of computerised shopping. Recently it included a guide to the best dirty bookshops (CW, March 8) that led to five plain-clothes policemen visiting one of them and removing hundreds of erotic novels, magazines and films. Post Office chairman Sir William Barlow has called for a report.

Other applications of computers in the retail trade tend to be somewhat less disconcerting and involve more mundane aspects like stock control and check-outs.

The first serious attempt to decide whether computerised check-outs would be economic in the UK was made some six years ago by the Institute of Grocery Distribution. It published a report which examined the value of a standard product numbering system and it decided, on the evidence available in 1974, that there was value in adopting a standard system, but only if it was used in conjunction with suitable code-scanning equipment.

ment end then only in the long term.

What then, has happened since 1974 to have induced the current substantial investment in computers in shops? The biggest slice of the retail trade is the supermarket sector. So it was here that the installation of a standard numbering system was essential if the spread of computers from the stockroom or warehouse was to reach other parts of a typically widely-distributed supermarket organisation. It is reported that nowadays over 85% of goods sold in US supermarkets are bar coded and are hence capable of being checked by electronic scanners.

This is made possible by a remarkable voluntary agreement between the US food manufacturers and the US food retailers. The agreement covers the standard numbering of the various products by means of a bar code in the food processing factory or warehouse and the computerised reading of that same code at any of the innumerable points of sale situated anywhere in the US.

The Universal Product Code (UPC) is used and the one that is being adopted throughout Europe (ensuring that the universal code is anything but universal) is of a similar form and is called the European Article Number (EAN).

The allocation of numbers is much the same for both systems and is handled by a national authority which, in the case of the UK and Eire, is the Article Numbering Association (UK) Ltd.

On the payment of a fee, a food manufacturer is issued with his own unique four or five digit number. The rest of the EAN number that is bar-coded on to the goods contains two digits for the country which issued the number, either five or six more digits for the manufacturer's own use and finally a check digit.

In order for the system to work smoothly each product that is manufactured has to have a different number. For example, instant coffee granules is different from instant coffee powder and each pack of either, whether it is 50g, 100g, 200g or more, must also be coded differently.

Additional numbers for each variation in the packaging—for example, glass, tins, plastic cartons or cardboard boxes—are also needed. Hence the need for five or six digits per manufacturer. Some of the major computer manufacturers—IBM, ICL and NCR—are making considerable headway now in providing their own computerised retailing systems for many UK retailing chains. But what can be constructed without using those brand leaders? Stuart Rickler of GTS has published the following price lists:

ANY SMALL RETAIL OUTLET

VDU	500
20 column receipt printer	250
VDU	400
20 column receipt printer	250
Computer	400
Total	£2,200

This assumes there is a separate computer centre to carry out the processing.

ANY SUPERMARKET WITH EIGHT POINTS OF SALE

Keyboards/displays	2,400
20-30 column receipt printer	400
VDU	400
CPU + 20 mbyte disc	1,000
1 report printer	1,200
Total	£5,400

or, £2,189 per point of sale including processing the data.

Note: no allowance has been made for software in either scheme.

How has the retail industry responded to these innovations? The replacement in 1971 of nearly every cash register in the country, because of devaluation, is felt by some people in the retail trade to have been the main reason for the somewhat sluggish response to the call for even more investment in point of sale hardware when it first became computerised.

But devaluation was nearly 10 years ago. As those cash registers are now nearing the end of their economic life, many will need replacing anyway.

Another problem for the shop managers during the 1970s was the uncertainty that was created by the withdrawal of Pinter-Bowes from the PoS market and ICL's takeover of Singer. They were also keen to see how the arrival of computers in the US retail trade was received.

IGD's second report investigates what the state of the art is in 1980 in the UK PoS scene's supermarkets. The report's first conclusion is that the effect of electronic developments at the point of sale with the widespread use of an article numbering system, could produce as big a retailing revolution in supermarkets as the self-service revolution of the 1950s.

It sees the effects permeating through many industries including computer equipment manufacture as well as data processing. It also concludes that 70% to 80% of products by volume must be bar-coded before the investment in the necessary system (more than £10,000 per point of sale) is worthwhile.

It took four years to achieve that level of bar-coding in the US, but the report suggests that Europe is likely to do it quicker. Informed opinion on which year the UK will reach that 80% threshold ranges from 1981 to 1983, with some Jeremiahs thinking that it will not happen even by then.

Nevertheless, it is revealed that at least six of the 10 leading UK supermarket chains are fully computerised PoS systems. As those six chains have a turnover of about £4,000 million a year and currently hold two-thirds of the UK's total grocery sales between them, such a level of activity must indicate a powerful commitment to the idea.

1. Evaluating the feasibility of systems in the UK grocery industry. IGD. (This report is now out of print).

2. Survey of point of sale systems by IGD. £45 to non-members. IGD, Grange Lane, Letchworth, Herts. SG9 6JH.

Data General wins factory 'arson' case

THE six-year-old legal action against Data General in the US in which computer hardware manufacturer Keronix claimed that DG had hired people to set fire to its factory at Santa Monica in California, has been dismissed by California Superior Court Judge Lawrence Rittenband.

The judge also dismissed Keronix claims that DG had hired private detectives to wire-tap Keronix phones, and allegations of unfair competition and interference with Keronix customers by DG.

But Keronix has now filed an anti-trust

suit against DG in the Federal District Court for Northern California, while a DG action against Keronix for alleged misappropriation of DG trade secrets and proprietary information relating to design and memory manufacture has just started in the California Superior Court.

Meanwhile, Digital Equipment has just settled its three-year-old action against Electronic Memories and Magnetics by agreeing to a licensing deal that allows EM&M to build heavy duty versions of the

PDP-11 for military and avionics use. DEC's suit, filed in the Boston Federal Court, claimed that EM&M had produced two microcomputers that used DEC software in violation of patents.

DEC has also settled its litigation with Ampex which started in 1977 and involved anti-trust, trade secret and patent claims relating to computer products. The terms of the agreement, described by both parties as "amicable," are confidential, but call for the dismissal of all claims made by either party against the other.

GA puts up prices

GENERAL AUTOMATION has joined the army of minicomputer makers raising their prices, with average across-the-board increases on hardware and software of 7% in the US. Underlining the dramatic impact of double digit inflation in the US, the increase is the first in the company's 12-year history.

NEWS IN BRIEF

Three sign for maintenance

COMPUTER Field Maintenance has won contracts worth £100,000 a year with three firms to take over the maintenance of IBM-compatible equipment made by General Telephone and Electronics.

GTE pulled out of the UK market over two years ago, but left a field service team to maintain installed equipment which includes front end processors, VDUs and printers. The customers are British Steel, the Meteorological Office and at Stockbrokers Bache Halsey Stuart Shields. The contracts all run for three years.

Naked Mini

THE Naked Mini family from Computer Automation has been extended at the top end with the NM4/85, a machine which provides features like a 2K cache with a 50 nanosecond access time and a memory management unit which enables up to eight megabytes to be addressed. Naked Minis are aimed primarily at the OEM market.

500 terminals

BARCLAYS Bank has placed an order with Burroughs for 500 B90 terminals. They account for the 500 B90 orders claimed by Burroughs when the B90 was announced (CW, January 17). The B90 will replace ageing Burroughs TC600 and 3500 terminals at Barclays branches. Many branches have already been re-equipped with Burroughs B90 terminals.

First sale

A MARKETING agreement between Safe Computing and Eurodata, ICL's System 10 dealer in Greece, has followed Safe's first sale there of its SafeS production control package.

ICL 7700 snags 'ironed out'

DESPITE some problems with the terminal software, which have been reported by other users, Morgan Grenfell DP manager A. R. Gibson is "generally satisfied" with his three ICL 7700 word processors. "We've just had a new release of the software which ironed out some of the problems," he told Computer Weekly.

The bank is planning to use the Wordkill Manager mainframe package which turns the 7700 into a distributed office communications system, and allows interaction between the word processors and mainframe files.

Three bidders for BOC's ICL service

BOC DATASOLVE has lined up three serious prospective purchasers for its ICL 2000 VME/B service, which the bureau wants to sell because of the slow rate at which 2900 users are converting from DME to VME/B.

Conversion work has provided most of the VME/B service turnover which has grown from nothing to £1.2 million over the last three-and-a-half years. But the service only broke even last year.

BOC Datasolve is selling the complete VME/B operation including a five-megabyte 2872. Many of the 35 staff were originally from ICL's development centre at Brecknell. The operation is currently based at BOC's Sunbury-on-Thames bureau centre, and BOC Datasolve managing director Chris Wood said that the purchaser could continue to run the service from the Sunbury premises if required.

Wood pointed out that the interested parties consisted of a foreign company which was not in the bureau business at the moment, and two UK computer services firms.

Plessey's warfare simulator

A SYSTEM which models the complete engagement of aircraft, radar and air weapon systems when the aircraft is within the range of selected fire control radar, is now nearly complete at Plessey Electronic Systems Research after four years of development.

The Electronic Warfare Engagement Simulator is to be used as a research tool by the Defence Weapons Department of the Royal Aircraft Establishment at Farnborough. Its function is to aid development of electronic countermeasures, ECM, techniques.

Two unidentified computers and five microprocessors, likely to be micros, perform dedicated tasks such as creating the tracks of the attacking aircraft in three dimensions, and representing a radar cross-section of the aircraft.

Array processing at 10 million instructions per second

ARRAY processing at 10 million instructions per second is offered by the AP400 from Analogic. This one cubic foot box costs as little as £12,500 and it can interface with Digital Equipment, Data General, Hewlett Packard and Perkin Elmer minicomputers.

Analogic points out that the AP400 is considerably less expensive than competing array processors from Floating Point Systems and CSPI and that 500 units have been shipped in the US since the AP400 was launched there 18 months ago by Analogic's US parent.

Analogic explains that the speed of the AP400 is achieved using a combination of pipeline and parallel features. It can be programmed in Fortran or assembly language on the host minicomputer and Analogic offers a library of routines covering functions like basic vector and array operations and fast Fourier transforms.

Analogic says that existing uses for the AP400 include processing seismic, speech and vibration data while potential applications areas include robotics, automatic test equipment and computer aided design and manufacturing.

Dicoll system for Hull's flood plan

A COMPUTER-BASED data acquisition, storage and display system for Hull's anti-flood scheme is to be supplied by Dicoll Electronics, Basingstoke. The Dicoll system, based on a Digital Equipment LSI-11/2 processor, will be used with the main telemetry equipment which will monitor and compare incoming water levels with predicted flood levels.

Data gathered from four outstations will be available for analysis via VDUs and in the event of a flood threat a tidal surge barrier will be lowered across the River Hull.

Magnetic tape from Control Dataset.

Because your major investment must deserve the major supplier.

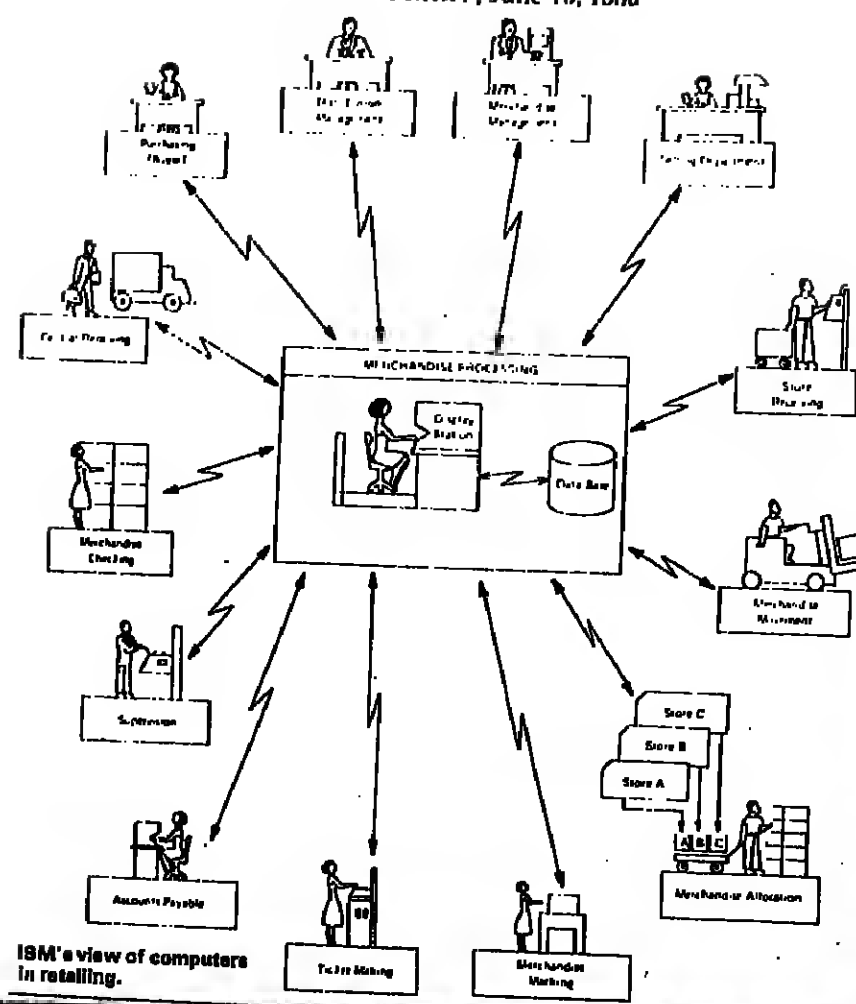

It's no surprise that Control Dataset is the UK computer industry's leading supplier of magnetic media.

Main frame businesses know there are strong reasons for relying on Control Dataset. Such as the system/drive/head/media total technology capability of Control Data Corporation. The exclusive supply of GDC and ICL label products. And the backing of Britain's biggest sales and technical support force.

CD Alpha and Omega label and ICL label products are exclusively manufactured at Control Data's UK plant, allowing full control over production and simplifying delivery.

So rely on the leading brands from the major supplier. Call 0438 9399 for all your magnetic tape requirements, or write to Control Dataset Limited, P.O. Box 16, Argyle Way, Stevenage, Herts. SG1 2AB.

CONTROL
DATASET

Name _____ Address _____ Telephone _____

COMMUNICATION NEWS

Americans will have to buy their own phones

THE US Federal Communications Commission, has ruled that by 1982 all subscriber telephone equipment will have to be bought rather than rented, and American Telephone and Telegraph may enter the data processing market. This will end many legal wrangles about whether elec-

tronic mail and packet switching are communications or whether they constitute data processing services which AT&T was forbidden from offering under the 1956 Consent Decree in exchange for the privilege of operating in a regulated market for telecommunications.

Discovering datacomms

FINDING ignorance of basic principles of data communications among would-be technicians led Brian Warrington to prepare a training guide for newcomers.

After becoming managing director of the UK subsidiary of terminal and acoustic modem maker Anderson Jacobson, he looked into the cheapest way of printing about 1,000 copies for in-company use, and his public relations agents suggested publishing it as a book.

The result is Discover Data

Communications, published by Northway Books in London at £4.50, which after mis-spelling, Anderson Jacobson in the acknowledgments settles down to a simple introduction to some of the equipment and methods commonly used in data communications in an engaging environment.

It includes a glossary of terms and a review of the CCITT V-series recommendations for modem interfaces to terminal equipment and telephone lines.

Enhancements to Tymnet message switch service

A CHOICE of ward processing facilities for input terminals, plans for direct communications from Asell terminals to facsimile terminals, and fax-to-fax message switching by the winter, are enhancements announced by Tymnet for its OnTyme message switching service in the US.

Some of the word processing facilities are now available on

Arbat for Natwest

ARBAT has sold an Intellex-11 message switching system to the National Westminster Bank. The system, based on a Digital Equipment PDP-11/34 processor, will join a variety of other communications equipment in the bank's new tower block headquarters in the City of London.

the updated service, called OnTyme II, and further commands are to be added in coming months. The message switching services are not available in Europe because the International record carriers - ITT, RCA and WUI - are objecting to the Federal Communications Commission giving its approval. They fear big losses of telex traffic.

The facsimile conversion enhancements will be implemented using the AFT translator device made by Compaq Labs of Cupertino, California. They mean that it will be possible to send messages without knowing what kind of facsimile receiver or data terminal the recipient has.

Software for the service is written in Pascal and runs under the Isis operating system in the

Tymnet Engine node processors. It supports a wide variety of terminals from Telex to IBM 3270 and devices compatible with them as well as most Asell terminals.

Facsimile devices supported include CCITT Group 1 and Group 2 types, which receive an A4 page in six and three minutes respectively. Tymnet estimates that 85% of the 200,000 facsimile transceivers in the US will be reachable via its service.

Features of the service include least cost routing, automatic dial-out to an auto-answer terminal, or "mailbox" storage for dial-in collection and multiple delivery to a pre-defined group or a list of recipients.

From September the option of postal delivery called Tymnet-Gram is to be added to the message service, aiming to enable single A4 page messages to be delivered quickly and cheaply to people not accessible directly from Tymnet. Tariffs are planned at one dollar per message sent, reducing to 30 cents each when large numbers of messages are sent in a batch. They are to be distributed from 30 metropolitan post offices and will be expected to reach their destinations the day after sending in 90 per cent of cases.

● Telenet, now a subsidiary of General Telephone and Elec-

tronics, has also announced a message switching service called Telemail to go into service on July 14. It aims to reach a variety of desk top and portable terminals, which it estimates total 1.5 million in use and potentially accessible.

It has asked the Federal Communications Commission to approve tariffs of 22 cents a minute during business hours and five cents a minute outside them, with volume discounts of up to 50%.

Speaking fax machine

THE Voice Guide Panel for 7700 facsimile transceivers from Matsushita Graphic Communication Systems use standard chips to produce synthesized speech messages to guide the user through operation and fault recovery procedures. It is on sale in the US at \$7,200 and operates in all modes including the CCITT Group 2 standard for transmission of an A4 page in three minutes.

Transmission in six minutes gives higher resolution and the fastest speed is 40 seconds for an A4 page.

US firm gets licence

BRITISH Telecom (formerly the Post Office) has sold a licence for its double crucible method of drawing optical fibre for communications cables to Gellisco Electro Optics in the US. This company has been involved in optical fibre products since 1959 and claims to be the world's largest producer of optical fibre cables, components and systems.

The licence forms part of a technology exchange agreement between the two organisations.

The agreement also covers production of the glass raw materials and well-tested cable

construction techniques. Gellisco rates the double crucible process developed by British Telecom as the most versatile yet and the only one by which low loss fibres over 20 kilometres long can be produced without splicing.

● British Telecom has run the world's first trial of a submarine optical fibre cable in a nine kilometre loop in Loch Fyne, Argyll. Laying costs can be greatly reduced with such systems because optical fibre cables are much smaller and repeat spacings average 10 kilometres, against eight in analogue copper cable systems.

Yearbook omits Prestel

PRESTEL is a major omission from the 1980 edition of the Eurodata Foundation Yearbook, which gives detailed information on the data communications services provided by the 18 European PTAs. Facsimile also appears not to have been considered a data communications service in the UK.

However, £75 buys 484 pages of information - on tariffs and technical details of the services and the management structure of the PTAs themselves, which otherwise rather difficult to come by.

The Eurodata Foundation has moved to Broad Street House, 10 Old Broad Street, London EC4M 3JX.

Its main publication, the Eurodata 79 Study, has been completed by Logica, the prime contractor, and is due out in a few weeks.

Timeplex seeks patents TIMEPLEX has applied for patents on the multiprocessor architecture used in its Microplex Series II statistical multiplexer.

Timeplex president Ed Botwinick believes the scheme his company has developed will have real time multiprocessor applications besides multi-

plexing and could be as important to the company as the Unibus has been to DEC. The patent applications relate to the structure of the around which systems are designed and the methods used to allocate tasks and handle high-speed data transfers between processors.

Canadian \$56m project

THE government of the Province of Saskatchewan in Canada has begun a four-year, \$56 million project to use optical fibres to carry integrated voice data and video signals through a 3,200 kilometre broadband network.

COMPANY NEWS

Datapoint snaps up \$500 million sales by 1983 is aim troubled Inforex

THE rapidly expanding manufacturer of distributed processing systems, Datapoint, is acquiring troubled key-to-disc systems supplier Inforex in order to strengthen the field service operations for Datapoint kit in the US and some key areas of Europe.

An agreement in principle between the two firms was reached about two months ago including an option for Datapoint to buy the Inforex subsidiaries in Europe (CW, April 17).

Datapoint executive vice-president of corporate development, Ed Gistaro, told Computer Weekly Datapoint was particularly interested in the Inforex service organisation in Europe because Datapoint's agreement with TRW, under which the huge engineering conglomerate is the master distributor for Datapoint kit outside the US, was due to expire in 1983.

Gistaro said that the large Inforex marketing and service force in West Germany could be particularly valuable because

the existing distributor there, Gier Electronics, is 100% owned by TRW. So Datapoint may need a completely new West German operation in 1983.

At the same time Gistaro emphasised that a lot of existing distributors in individual countries that dealt with TRW at the moment would be retained by Datapoint after 1983. Notable among these is the UK distributor Ventek, in which TRW owns a 40% share, the majority being held by the Canadian government-owned organisation, Venturetek.

Ventek is far bigger than the Inforex subsidiary in the UK. Gistaro pointed out that Inforex was also being acquired for its big customer base of large and prestigious companies. Inforex is best known as a supplier of key-to-disc data entry systems to big mainframe users.

On the question of what Datapoint would do with the Inforex product line, Gistaro said that no decision had been made yet on whether to continue shipping the two most up-to-date Inforex products, the

5000 file management system and the 7000 clustered intelligent terminal with interactive Cobi.

Gistaro suggested that the Inforex marketing force in Europe might continue selling the 7000 for the time being because of the bar on them selling Datapoint's own kit on this side of the Atlantic until 1983.

But he pointed out that the large existing base of Inforex kit in Europe was already generating enough revenue to cover the cost of retaining the Inforex workforce in Europe up to 1983.

Asked to comment on the reasons for Inforex's troubles, Gistaro said that the Inforex product line was rapidly becoming obsolete while the new 7000 system had not got off the ground yet.

\$500 million sales by 1983 is aim

DATAPoint is keen to take over control of its international marketing in 1983 and it informed TRW officially in March of its decision not to renew the master distributor agreement.

The deal with TRW was made at a time when Datapoint locked the financial resources to set up an international marketing operation. In contrast TRW's mighty resources included 30,000 employees in Western Europe alone.

Datapoint is now a more substantial organisation, having chalked up net profits of more than \$28 million on revenues of \$222 million in its 1978 financial year ended July 31. Revenues for the current year are expected to reach \$300 million and the aim is to exceed the \$500 million mark by 1983.

The Datapoint men in charge of international marketing, Herb Hensley, pointed out that Datapoint was selling its products to

TRW at about half price as that business done by TRW's distributors outside the US was providing Datapoint with only 21% of its revenues even though it accounted for 40% of all deliveries.

Europe provided no maintenance revenues for Datapoint and no lease revenues while more than half the kit installed in the US by Datapoint itself was generating lease revenues.

The rate of growth of Datapoint business outside the US is an impressive 33%, but that is still slower than the domestic growth rate. TRW has fewer incentives than Datapoint to invest in training and support and to take marketing risks that might increase its market share.

Datapoint's ambitious plans include taking a major share of the office systems market with its Integrated Electronic Office (IEW, January 10).

Pets breed success

NET profits of \$3,990,000 for the second quarter ended December 31, reported by Commodore Business Machines, have more than doubled compared with \$1,340,000 for the same period in the previous year. Turnover of \$31,516,600 was also more than double the \$15,677,000 recorded in the previous year.

These figures are attributed by Jack Tramel, president of the Commodore systems division. In the UK sales of the Pet have exceeded 18,000, and CBM claims to have 50% of the UK market for microcomputer systems (CW, January 3).

Profits up 52%

NET profits for the past financial year are reported by General Instrument to have increased 52.4% from \$32,524,748 the year before to \$50,580,532. Turnover for the same period increased 30.4% from \$550,848,002 to \$718,103,819.

DON'T LISTEN TO THE NOISE OUR COMPETITORS ARE MAKING.

Trying to compete with the noise of a computer printer is virtually impossible in an office environment. It can lead to inefficiency and, if the noise is loud enough, even ill-health. Sooner or later, somebody had to tackle the problem. And it's no surprise to find that the industry's leading independent printer manufacturer should be the first to do it.

A new concept By using completely new concepts in sound reduction techniques, Centronics have reduced the noise output of their new line printers to less than 60 dBA. The first two models of Centronics new line of quiet printers are available now.

The 6080 A band printer, which can operate at speeds of 300 or 600 lpm, the 6080 has been specifically designed to meet the low noise requirements of the modern business environment. Without sacrificing anything in the way of performance or reliability, the 6080 has also been designed to meet all relevant European safety standards.

The 737 The 737 is the second in a new family of low cost miniprinters from Centronics, and has been designed for the micro-computer based small business and personal computing markets.

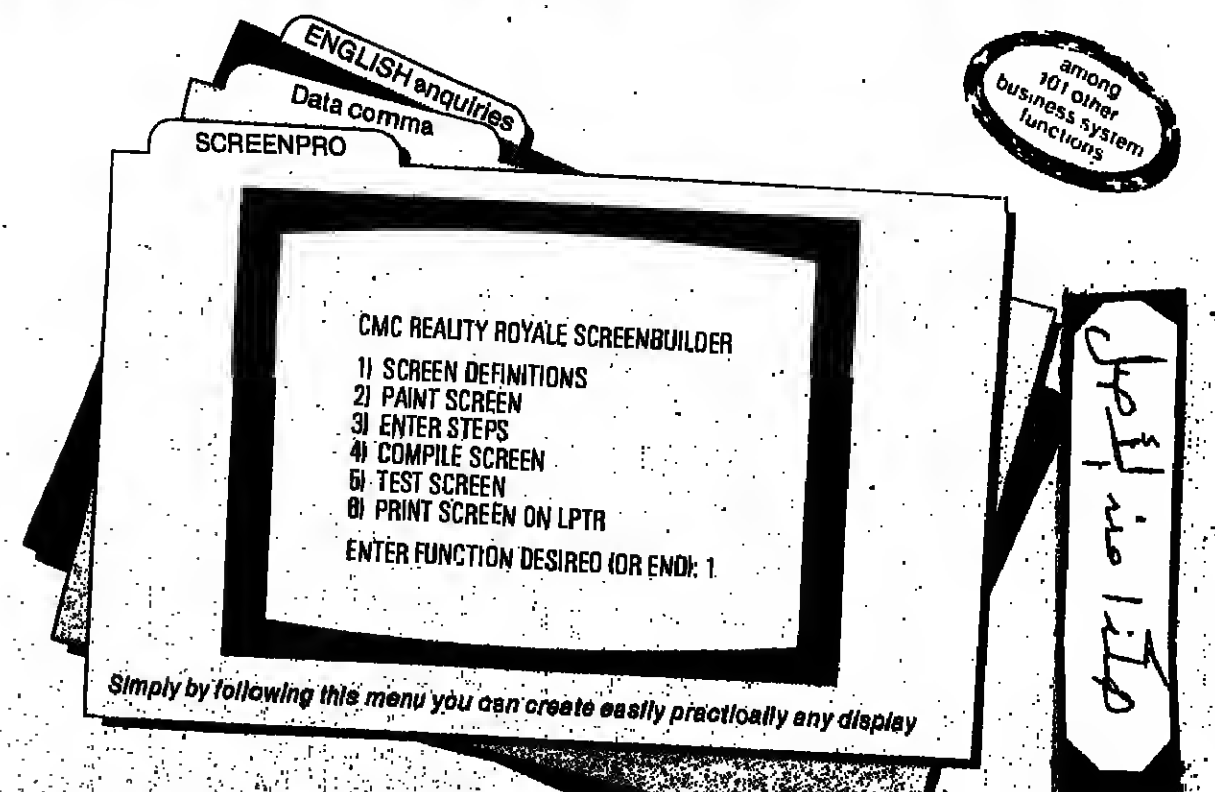

The 737 Miniprinter provides correspondence quality printing in monospaced or proportional spaced characters and can handle cut sheet, paper roll or fan-fold paper without any adjustment.

CMC REALITY ROYALE for easy screen development using SCREENPRO

Use function (1) to enter or amend parameters for the whole screen; (2) format a new screen or reformat an existing screen; (3) enter or amend parameters for each field - editing, validation, etc.; (4) compile the screen format and parameters; (5) test the compiled screen; (6) generate all the documentation.

SCREENPRO is a new suite of programs enhancing REALITY ROYALE'S operating system software and enabling the user to describe formats and process data in a workable form. At the CRT, SCREENPRO eliminates much time-consuming conventional data formatting and entry procedures. Now the REALITY ROYALE user/operator can link with DATA/BASIC and appropriate dictionaries by means of built-in prompting characteristics that assist in guiding the user through each format at the same time eliminating errors.

SCREENPRO does for input what ENGLISH does for output!

REALITY ROYALE, made at Hamel Hempstead by Computer Machinery Company (est. 1969), is a mini-computer based, data base management/business information system particularly useful when a mass of facts and figures require frequent, speedy access. And it is especially clever at answering unheeded enquiries and analyses needing prompt attention. It is available with Business Control Programs (BCP) and Manufacturing Control Systems (MCS) packages controlling every aspect of accounting and production.

Microsystem Manufacturer seeks Systems/Software House Agents.

We have been appointed distributors in the UK to market an advanced and growing range of microcomputer-based systems suitable for business, process control and industrial use.

Our principal is a large American company and a leader in technology. We are now looking for a defined number of systems/software specialists to package software with these systems and supply complete products to the end user. We can offer an attractive agreement to the selected partners. For a real profit and growth opportunity write a brief description of your company's capabilities and size and send to Box No. 1098.

ADVANCED FILE DESIGN—Part 10

File structures for database systems

AS we have seen in earlier works, indexed sequential files provide a compromise between sequential files with their capability for efficient batch processing and direct files and their more immediate response.

The fact that standard software is available means that there is less design effort required by the user than for a direct file where the user has to choose an algorithm, loading method, overflow handling routine etc. It is no surprise therefore that indexed sequential files are widely available on all types of machine from the microcomputer to the large mainframe.

Since indexed sequential files were first introduced the DF environment has changed quite considerably. Perhaps the two most significant changes that affect file organisation have been the move towards online systems and the database approach.

Online systems have produced a need for quick response to queries and a high measure of security and integrity, whereas the database approach has produced a requirement for the

facility to access data records in many different ways depending on the application. It is worth noting that these two developments do not necessarily go hand in hand and that it is possible to have a database system that isn't online or vice versa.

In Part 10 we shall examine some of the concepts of database systems as they affect the file designer and in Part 11 some specific database management systems will be studied.

The database approach

With the types of file organisation discussed so far we have seen how the design of a file or set of files can be optimised to suit the application. With the database approach, however, files can be accessed by several different applications—in fact the individual applications can be viewed as data channels through which data is added to or retrieved from the database.

The database itself may be a single file or a set of files, the important fact being that the database can be accessed by different programs in different ways. For example a personnel file normally accessed via a record key of payroll number for

the production of payslips and similar documents, may need to be accessed via employee skill codes for production planning purposes.

The programs accessing the database may be regular production programs such as payroll management statistics, or may be of an ad hoc nature and run only once, especially if high level query facilities are provided. It is thus not relevant to optimise the database for any specific single application.

Logical and physical database

The logical and physical concepts were first introduced to cover the case of record blocking where the words are used to represent application program-oriented and device-oriented records respectively.

The logical concept has been extended further in a number of ways to cover the relationships between data fields or elements as well as records. Once the data fields of a database have been determined a logical data model of the database can be constructed representing the application-oriented view of the database.

The physical database is concerned with the actual storage of data on the available peripheral devices. The mapping of the logical database to the physical database is normally accomplished by a set of routines known as the database management system (DBMS). Application programs are completely removed from the physical data

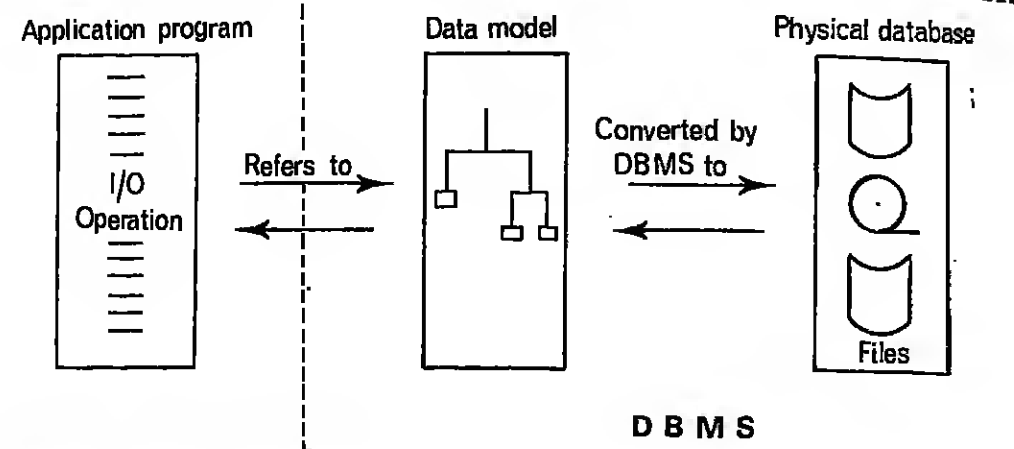

Diagram 1: The database environment.

base and can only gain access to it via the logical database.

The I/O operations in application programs which access the database files are special database I/O instructions which operate on a logical database; the DBMS then translates these into physical I/O operations (see Diagram 1).

The objective of this approach is to keep applications independent of physical data storage so that either can be changed with minimal disturbance to the other, at least in theory. This concept is sometimes referred to as logical data independence.

At present there are three generally recognised data models, namely the hierarchical, network and relational. In the hierarchical model (Diagram 2) data fields and records are related by a parent-child relationship (as illustrated in the diagram by cars and their engines). It is worth noting that the hierarchy can be deeper than the simple two level one in this illustration.

The network model permits a record to belong to a number of parents thus permitting a more economic logical structure. Diagram 3 illustrates this for the same data used in the previous example.

In the Codasyl database model this structure is built using the set concept where a data field may be the owner of a set comprising data fields which are members of that set, though certain restrictions on set membership and ownership further limit the structures that can be built.

The relational data model employs tables of data elements known as relations stored in third or fourth normal form.² DBMS selection

As far as the DBMS is concerned therefore, we have the situation that there are a variety of data models which have to be mapped on to available file storage peripherals and file organisation techniques, preserving as far as possible the ideal of logical data independence.

Once a data model has been selected, then a choice of the DBMSs supporting that model can be made in such a way as to optimise the performance of the physical database for a given environment.

It is here that there is the first opportunity for optimisation, since the database can only be constructed using the physical file organisations supported by DBMSs.

For example if an organisation has large volumes of sequential batch processing and relatively few query-type applications, then choice of a DBMS based on inverted random files with multiple indices is unlikely ever to achieve the same performance as a DBMS using indexed sequential files, however well the former was optimised.

Once all functional requirements have been met therefore, a DBMS should be chosen which is most suited to its operational environment. The larger DBMSs normally offer scope for matching the database to any particular environment by giving a choice of physical file organisations covering the whole spectrum from pure query to large batch-type applications. Smaller systems such as those for mini- and microcomputers do not generally offer such a choice.

When a database has been set up, the individual files may be optimised by the techniques described in earlier parts that are appropriate to those file organisations.

It is unlikely that the overall

hardware performance in a database environment would equal the performance of having separate applications each carefully optimised (as early DBMS users found to their cost!) because of the overheads needed to provide the flexibility of data access. Indeed, hardware performance is seldom given as a reason for the adoption of a database approach.

A difficulty in optimising the performance of a database system lies in knowing precisely what is happening to the database at any one time, especially in an online environment.

If a log of transactions is kept, an analysis of the transactions may help to optimise the database files by identification of bottlenecks or other snags.

This approach would be effective in situations where routine applications predominate rather than those when query-type applications form a significant part of the workload, since this method relies on historical data.

It is also possible to use hardware and software probes for this same purpose. Also, most DBMSs provide statistics of reorganisation which may be used in a similar way. A database system should ideally be self-optimising, and possibly a new generation of DBMSs using advanced storage technology will achieve this in a way that is completely transparent and automatic.

In Part 11 we shall examine further the physical file organisations for database systems and consider some specific DBMSs.

The Viewdata Exhibition

For Professional & Business People

Following the phenomenal success of last year's show, The Viewdata Exhibition for Professional & Business People will take the whole of the exhibition area available at the West Centre Hotel.

The event is expected to draw well over 2,500 visitors with a high number of overseas visitors reflecting the growth in this market worldwide.

The exhibits envisaged at this year's show include:

- Data equipment basic and advanced, portable and user terminals, private networks systems and equipment, peripherals including printers, magnetic media recorders, file aids, graphics design aids and keyboard accessories such as numeric attachments, multi-line sprays, screen pads and mice, telephone lines, microcomputers for teleconferencing and other 'conferencing' activities and further software networks for networked editing, publications, monitoring for images and many more.

WILL TAKE PLACE
29th - 31st OCTOBER 1980

More Billion \$ Brains . . . for Sales Support

Consultants

Analysts and Consultant Analysts

£12-£15,000 + Car

£10-£12,000 + Car

Why do we need more "Billion \$ Brains"? To help our client maintain the phenomenal and profitable growth pattern of the last five years. Next year the company is looking for its first \$1 billion turnover from the sale of the word processing and data processing systems. The growth is consistent and controlled, the potential enormous. Tremendous opportunities are available to everybody within the company, not only for exceptional earnings but also for complete job satisfaction.

Consultants

£12,000 - £15,000 + Car

Analysts and Consultant Analysts

£10,000 - £12,000 + Car

We expect Consultants to have experience working with IBM hardware and to have had some exposure to the special environment of large, national or multi-national organisations. We expect excellent personal skills - people who are presentable, competent, self-motivating, responsible and capable of making presentations to all sorts of audiences.

Further, we expect proven technical skills in systems analysis, design and programming, preferably with virtual machines.

We need people with a good technical background, preferably with IBM equipment. These roles are primarily in pre-sales situations and therefore applicants must be presentable and personable. Technical experience will include systems analysis and design and preferably programming in COBOL, RPGII or BASIC. The product range uses Virtual Operating System techniques and experience of such systems would be an added advantage.

Please telephone (24 hour answer service) or write to apply. Quote Ref. CW 136.1

ALGERIA · OSLO · SUMATRA

£8,000-£12,000

SUBSTANTIAL BENEFITS

SYSTEMS IMPLEMENTER

**ANALYST/PROGRAMMER
RPG II**

**SENIOR PROGRAMMER
RPG II**

Three computer professionals, with at least two years' relevant experience, are required for the development and implementation of a variety of challenging applications using a network of IBM 5280s and/or System 34s which will communicate with the Head Office 4300.

Experience using IBM minis will be a significant advantage and the successful applicants can look forward to different levels of overseas travel.

Each position requires a mix of skills including technical, project control, implementation and support. Training will be given where necessary.

Our client plays a major role in oil exploration throughout the world, and, in maintaining its leading position, uses the latest decentralised computer technology to support its management and administrative functions. As the Company continues to expand, the persons appointed can anticipate exceptional career opportunities coupled with equal financial rewards.

The offices in Central London are within one mile of four British Rail main-line stations. Season-ticket loans are provided and additional benefits include a FREE PENSION SCHEME, FREE LIFE ASSURANCE, FLEXITIME and LVs.

REF. S1/1906/CW

SYSTEMS CONSULTANTS HARDWARE AND SOFTWARE

BERKSHIRE

A number of outstanding opportunities have arisen for both SOFTWARE and HARDWARE consultants as a result of the increasing demands being placed upon our client's System Reliability and Usability departments.

Our client can offer you the opportunity to direct the development of future Hardware and Software in the key fields of:

- ★ USABILITY ENGINEERING
- ★ USER/MACHINE INTERFACING

With Key responsibility for:

- ★ DEFINING DEVELOPMENT OBJECTIVES
- ★ COMPETITIVE EVALUATION
- ★ OPERATIONAL ANALYSIS

To meet the challenge that these positions offer, applicants must have a successful record, and substantial experience matching one of the following profiles.

SOFTWARE

- ★ SYSTEMS SOFTWARE DESIGN
- ★ OPERATING SYSTEMS
- ★ SYSTEM MODELLING

HARDWARE

- ★ MAINFRAME DESIGN ENGINEERING
- ★ LOGIC DESIGN
- ★ SYSTEMS ORIENTATION

Conditions of employment are excellent and good commensurate salaries are enhanced by first-class career prospects and fringe benefits. A generous relocation package is available where appropriate.

MIDLANDS APPOINTMENTS

A wide range of jobs and good financial rewards

THE Midlands must rate as one of the most important DP centres in the UK. Although not as intensive as London, in terms of the number of installations, it should not be regarded as a technological "back water". The range and types of installations in the Midlands are just as wide as the products produced. Birmingham itself has often been referred to as the "city with a 1,000 traders" ranging from cars to jewellery.

Perhaps one of the most interesting features of the Midlands is the wide range of sizes and types of companies operating in the region, offering DP professionals the opportunity of involvement in a wide spectrum of applications ranging from commercial, through manufacturing and distribution, to the scientific and financial modelling areas.

In addition to the wide range of firms and applications, most computer manufacturers are represented in the Midlands, ranging from large number crunchers with mass storage devices through a comprehensive selection of minis, and micros.

A number of firms have head offices based in the Midlands and make extensive use of communications equipment and distributed processing, thereby offering tremendous scope for the DP professional.

It is worthy of note that an increasing number of London-based organisations are in the process of or are actively considering moving head office operations to the Midlands to take advantage of the more reasonably priced business premises and better living conditions for their employees.

In addition to user installations, most mainframe and mini computer manufacturers have sales and support operations located in the Midlands and two large mainframe manufacturers have recently moved their UK training centres to Birmingham.

The area also has a number of successful software houses and bureaux, once again giving added scope to the data processing professionals wishing to broaden their experience. The Press seems particularly gloomy these days, announcing redundancies

In the majority of manufacturing areas, and while the Midlands is first and foremost a manufacturing centre, the commitment to data processing by Midlands based organisations is still a major one.

This is reflected in the numerous upgrades to equipment, new orders placed and systems development plans users are embarking on.

This has made the Midlands a thriving DP community, where most users have already established themselves in the standard range of applications and are now moving into more advanced areas of the business, where major benefits can be made.

In these areas extensive use is being made of all of the latest software available obviously including online, databases and distributed processing.

So from a career point of view, the Midlands has a lot to offer data processing professionals, but what about the environment - is it all foundries and canals? Not any more. The Midlands breaks down into the East and West and without waiting to start a civil war, the West

Midlands is the larger centre in terms of computer installations with major concentrations in Birmingham, Coventry, Wolverhampton and the highly industrialised Black Country.

However, even in the West Midlands you can live in a small rural town or village and still commute to the major centres within 30 minutes. A number of large sophisticated computer centres are located in rural areas including Worcester, Burton-on-Trent, and Stafford.

The East Midlands offers two main locations, Leicester and Nottingham, both cities enjoying excellent facilities and are renowned for offering inexpensive quality housing.

It is still possible to buy a modern centrally heated semi-detached house within daily commuting distance of Birmingham for about £18,000.

If you are feeling more ambitious, the Midlands can also accommodate you, but once again the accent will be on value for money.

In addition to being a reasonably priced housing area, there is a wide range of leisure activities, particularly well serviced by sports centres, numerous football and rugby clubs run both by employers and privately.

The National Parks in the Peak District and Wales are close at hand offering a wide range of facilities. The region is well equipped with first division football clubs as well as first class rugby and cricket.

The third most important point to any data processing professional must obviously be salary, having already discussed the installations and environment. In the Midlands, salaries over the last few years have steadily increased to the point now that most large data processing professionals well.

In fact, it would appear that salaries on offer in the West Midlands area in particular, do not seem to fall that far short of salaries offered in the Greater London area.

With so many benefits to offer, does the area actually have vacancies? The simple answer is yes. In the Midlands vacancies currently exist at all levels, where the minimum requirements is usually 18 months experience

ranging up to the most senior levels.

Companies in the area will pay realistic salaries, but do look for a good educational background, sound practical experience, proven career progression, combined with career stability. Companies generally look for applicants who can communicate fluently and are enthusiastic about their career and the DP industry in general. Inability or lack of desire to communicate on career achievement to a prospective employer is considered a big turn-off. At the more junior levels, especially programming, applicants should be prepared to put their knowledge on trial with an aptitude test or a technical interview.

On the subject of interviews, these two tips probably apply nationally as well as in the Midlands. If you are interested in a particular job, then be sure to let the employer know of your interest.

I am confident that many applicants have not been offered positions, because they fail to communicate their basic interest in a particular post.

The Midlands is second only to London for the number of installations and people employed in DP in Britain.

In this feature DAVID WADE, a director of the Birmingham based firm Specialist Computer Recruitment, gives his reasons why the Midlands is worth more than a cursory glance when considering changing job.

MIDLANDS APPOINTMENTS

MARTINS COMPUTER SERVICES

D.P. Recruitment Specialists

MANAGEMENT PROJECT LEADERS SYSTEMS ANALYSTS

SENIOR SYSTEM ANALYSTS WITH EARLY PROMOTIONAL OPPORTUNITIES TO SYSTEMS DEVELOPMENT MANAGER. At least 5 years O.P. specialising in On-Line Retail Commercial Systems Area Warwickshire Salary: £7500 plus relocation package. Ref: SA265

COMPUTER MANAGER. Several years' experience on Honeywell Mainframe and DEC Mini Computer. Area Staffs. Salary: £8000 plus company car. Ref: P484

Secondly, if an employer and you have either changed your mind about the interview or cannot make the appointment, then telephone and let them know.

To quote a Southerner who has lived in the West Midlands for ten years, "Civilisation does not cease north of Watford!" The people are generally a little less hostile, particularly in the rural areas. The quality of life is good and employers generally provide quite generous relocation packages to encourage good technicians to join them.

In summarising, I hope I have given an insight to the Midlands where the hard working, enthusiastic computer professional can gain good financial rewards, improved job satisfaction and provide himself and his family with a better standard of living.

In this age of pollution and high living costs, it makes sense to explore the Midlands. You do not know until you have looked, so why not check it out? You will find a great number of people living here who would not consider living anywhere else.

ANALYST PROGRAMMERS/PROGRAMMERS

ANALYST PROGRAMMER. At least 3 years in D.P. using Cobol. Experience with Software Support or Database Design an advantage. Area Coventry Salary: to £7500 Ref: P474
PROGRAMMER. At least 1 year programming in RPG II or willing to return experienced programmer using another language. Area Cornwall Salary: £5000 plus Ref: P473

EAST MIDLANDS PROGRAMMERS ANALYSTS PROJECT LEADERS

Minimum 18 months Salaries to £8,000 p.a. and INDEX LINKED

Our clients are a well established and highly professional computer services organisation. Operating both at home and abroad, they provide consultancy, support services, software products and bureau facilities to external organisations.

Major expansion in the East Midlands has created a number of posts which offer very real career development.

You will have the opportunity to develop your skills at all levels in:
REAL-TIME MINICOMPUTER WORK
A WIDE RANGE OF FINANCIAL AND COMMERCIAL APPLICATIONS
SYSTEMS FROM FEASIBILITY TO IMPLEMENTATION
RPG II, COBOL AND ASSEMBLER

Current projects involve ICL, IBM, Small Business Systems and Philips hardware as well as Microcomputers.

You should offer at least eighteen months' commercial experience. The particular hardware, language or systems are of minor importance.

Salary levels are excellent and INCREASE automatically with inflation. This area offers LOW-COST HOUSING and where appropriate, assistance with relocation will be considered.

Males or female candidates should contact Patrick Convey quoting reference number CVV 278

COMPUTER PERSONNEL CONSULTANTS
4th Floor, The Rotunda
Birmingham B2 4PA
021-632 6848

CPC

NORTH BIRMINGHAM

Our Client, the Computer Services Division of a large Manufacturing Group, is recruiting additional staff to cope with an increasing demand for its services. Group policy is one of developing DISTRIBUTED PROCESSING techniques with terminals allied to the central mainframe. Manufacturers packages are used where possible to handle the wide range of financial and manufacturing systems required. The salaries for these posts will be enhanced by the Annual Review which takes place in November and which should reflect the current rise in the cost of living.

SYSTEMS CONSULTANT £8,500 + NOV. REVIEW

To investigate and postulate solutions to a wide range of business systems problems. Broadly based experience of Manufacturing and Commercial systems is required together with the ability to deal with the clients at all levels.

SYSTEMS PROJECT LEADER £7,500 + NOV. REVIEW

A broad knowledge of Financial systems is required. Some programming and mini computer experience would be useful but is not essential.

To learn more about these excellent opportunities contact Peter Bowen quoting Ref. C1029. Phone Codsall (090 74) 4896 evenings and weekends.

NATURAL SELECTION

TEAM LEADERS · NOTTINGHAM – TO £7.5K

Applicants will ideally have several years programming experience in one or more of FORTRAN, COBOL AND IBM ASSEMBLER, together with the abilities to design systems and lead a small team of analysts and programmers for one of the top UK companies.
Contact Reg Heath, quoting ref. RH/J294.

ANALYST/PROGRAMMERS · BIRMINGHAM – TO £8K

Ideally you will have real-time systems experience using minis in a commercial or manufacturing environment. You should have good COBOL experience and a knowledge of FORTRAN or ASSEMBLER would give an advantage. These are very good career opportunities.
Contact Digby A. Dyke, quoting ref. DD/J232.

SYSTEMS ANALYST · WEST MIDLANDS – c£9K

Division of major manufacturing group requires Analyst to join small team developing on-line systems on expanding terminal network, utilising latest generation ICL mainframe. Applicants should have some programming experience. Car mileage allowance is paid for local business travel.

Contact Mark Ogden, quoting ref. MO/228.

MICRO PROGRAMMERS · RURAL WARWICKSHIRE c£9K

Our client needs Programmers experienced in the specification/design and writing of Micro Computer systems for Automation Systems in all Process Industry areas. The position contains elements of development of NEW standards, including total Customer Contact and Sales Support.

Experience in a real-time operating system and CORAL 66 (or equivalent) is desirable.
Contact Reg Heath, quoting ref. RH/J298.

COBOL PROGRAMMERS · NORTHAMPTON/EUROPE

18 months programming experience, including COBOL skills, could qualify you for this exceptional opportunity with an internationally known and respected company. You are likely to be in your early 20's, ideally have some ASSEMBLER knowledge, and will welcome occasional travel to Europe.

Contact Mark Ogden, quoting ref. MO/228.

SALES – £16K+ ON TARGET · BIRMINGHAM AND MIDLANDS

The leading British supplier of distributed data processing equipment seeks sales person to help pioneer Future Office Systems, utilising real-time hand print terminals and interactive colour televisions. Package includes 1.6L Cortina, expenses and high basic salary.

Contact Mark Ogden, quoting ref. MO/J245.

SYSTEMS ANALYSTS · WORCS. – c£9K

A real opportunity to become involved in the DEVELOPMENT of sophisticated REAL-TIME commercial systems on 4th generation ICL 2900 series hardware. Real career prospects in a superb working environment.

Contact Reg Heath, quoting ref. RH/J233.

Computer People Midlands

021-643 8501

Alpha Tower, Birmingham B1 1TT

Recruiting for clients

VISA

COBOL/CICS/DLI PROGRAMMERS BIRMINGHAM – c£8K

We invite applications from individuals with 'meaningful' experience of COBOL programming in a Database/Teleprocessing environment. Utilising the latest IBM 4th generation hardware, our client is a profitable Major Group of Companies with a total commitment to DEVELOP NEW sophisticated Systems offering long term career prospects in an enlightened working environment.
Contact Reg Heath, quoting ref. RH/J230.

SYSTEMS ANALYSTS · WEDNESBURY – TO £8K

People with 2+ years experience in general commercial systems ideally including order processing, sales ledger or credit control are required urgently. You would be involved with the development of real-time systems on ICL mainframe with 100+ terminals throughout the UK.
Contact Digby A. Dyke, quoting ref. DD/J297.

IBM COBOL PROGRAMMERS · NOTTINGHAM – TO £7.5K

Our client has vacancies at many levels for experienced programmers. Training and career prospects are first class. Many major projects are now being developed using minicomputers, databases and real-time techniques.
Contact Reg Heath, quoting ref. RH/J296.

SENIOR ANALYST PROGRAMMERS · WALSALL TO £7.5K+ BONUS

Your 2½ years experience should include IBM OS and PL1 commercial programming. You will be involved at all stages of systems development and design, program specification writing, supervision of programmers, systems implementation and user-training.
Contact Digby A. Dyke, quoting ref. DD/J292.

SUPPORT ANALYST/PROGRAMMER · WEST MIDLANDS – c£6K

Microcomputer systems and marketing organisation with backing from major international group seeks support person with at least one year's experience in systems programming, or a longer involvement in applications programming. Any previous microcomputer experience or ASSEMBLER level programming knowledge will be advantageous.
Contact Mark Ogden, quoting ref. MO/271.

COMPUTER AUDITOR · NOTTINGHAM – TO £6.5K

If you have a minimum of 1 year commercial IBM COBOL programming experience and a desire to work with micros, minis and mainframe, this interesting and challenging position should appeal. Career prospects to analysis are good.
Contact Reg Heath, quoting ref. RH/J295.

APPLICATIONS PROGRAMMERS · BIRMINGHAM – TO £6.5K

People with 12 months+ experience of COBOL (any hardware) or with PL1 ASSEMBLER experience to be trained in COBOL are required by a large multi-national company. Career progression provided for advancement to Team Leader jobs or move into Systems Analysis work.

Contact Digby A. Dyke, quoting ref. DD/J231.

COBOL PROGRAMMERS RURAL WARWICKSHIRE c£7.5K

A rare opportunity to DEVELOP NEW IMS DATABASE Systems in the MATERIAL CONTROL/ENGINEERING/PROCESS CONTROL and ACCOUNTING areas on sophisticated IBM 3033 hardware utilising the latest DATABASE software. 2/4 years COBOL experience and a desire for analysis involvement is essential.
Contact Reg Heath, quoting ref. RH/J299.

CICS PROGRAMMER WEST MIDLANDS – UP TO £7K

Experienced IBM CICS programmer seeking involvement with design work will be attracted to this post. International company with modern premises offers on-line mainframe installation. COBOL experience is desirable, and knowledge of DLI/1 will be advantageous. Candidates will preferably have worked in a DOS/VS environment.
Contact Mark Ogden, quoting ref. MO/51.

Response Procedure: To obtain more details, telephone for a confidential application form or send the coupon (no stamp required) to: FREEPOST, Computer People Midlands, Alpha Tower, Birmingham, B1 1BR.

£7,000 **PROGRAMMERS** Birmingham B/886
Programmers with good COBOL experience. CICS and OL1 an advantage. Large IBM mainframes, expanding commercial environment.

Consultant: Christine Pountney.

SOUTH MIDLANDS & WEST COUNTRY

Up to £5,500 **SENIOR OPERATOR** Wores. W258
3 years' experience IBM/COBOL. 2 shifts.

Up to £7,000 **PROGRAMMER** Wores. W257
3 years' IBM CICS experience, PL1 or COBOL.

Up to £7,500 **SENIOR ANALYST** West Country W281
3 years' experience as an Analyst. IBM Installation, Manufacturing/Financial/Commercial work.

Up to £4,500 **JUNIOR OPERATOR** Bristol W282
1-2 years' experience, IBM Installation, Bureau environment, 3 shifts.

C.£7,000 **SYSTEMS ANALYST** Avon W288
Some programming experience, ICL installation, Manufacturing/Financial/Commercial work.

Up to £8,000 **PROGRAMMER** Glouce. W288
2/3 years' COBOL experience, preferably some design experience, IBM installation.

Negotiable **PROGRAMMER** Somerset W273
2/3 years' COBOL experience, preferably on ICL equipment.

Consultant: Hazel Foggitt.

NORTH-EAST MIDLANDS

£7/8K **SYSTEMS ANALYST** Sheffield C403
4 years' experience of Honeywell B4/V60. To work on interactive systems including raw material stock control.

C.£6,500 **ANALYST PROGRAMMER** Leeds C416
2 years' experience in COBOL programming, ICL equipment, Commercial environment.

£8,000-£8,800 **PROGRAMMER** Derby C428
2/3 years' experience using IBM Assembler language. Mainframe programming.

£8,500-£8,000+ **PROGRAMMER** Leeds C433
At least 3 years' Assembler Programming experience ideally with knowledge of CICS/VS, QSV1, Financial environment.

£8,000+ **OPERATOR** Derby C434
Proficiency experienced on ICL hardware. Solely responsible for operating normal system.

£Negotiable **PROGRAMMER** Nottingham C436
3 years' COBOL programming experience and experience in developing major systems.

£4,500-£8,000 **PROGRAMMER** Leicester C437
Minimum of 1 year's COBOL Programming, ideally on Honeywell equipment.

Consultant: Nigel Carr.

SOUTH-EAST MIDLANDS

£Negotiable **SYSTEMS ANALYST** Works. EM803
2-3 years' experience in design, preferably in manufacturing, financial or marketing environment.

£8,500-£8,800 **SYSTEMS ANALYST** Bedfordshire EM804
Minimum 5 months' analysis experience, preferably on ICL equipment, Manufacturing environment.

To £9,000 **SENIOR ANALYST** Peterborough EM807
5 years' analysis experience (preferably IBM), Database and data analysis. Commercial environment.

To £9,000 **SENIOR PROGRAMMER** Peterborough EM808
5 years' IBM COBOL experience, Financial/business background. Some supervisory experience.

£Negotiable **PROGRAMMER** Coventry EM811
Sound programming experience using COBOL language and ICS. Query environment.

£Negotiable **SYSTEMS ANALYST** Cambs. EM809
To develop new systems and enhance existing systems using main and IBM mainframes. Knowledge of programming languages.

£Negotiable **ANALYST/PROGRAMMER** Coventry EM798
To implement, develop and maintain software for both on-line and batch systems. TIP/CMS and DMS 1100.

Consultant: Margaret Bruce.

MIDLANDS APPOINTMENTS

ARE YOU GOOD ENOUGH FOR PROJECT RECRUITMENT?

We have fewer people on our books than any other recruitment agency. That's because a lot of people aren't good enough. Life's hard and our clients haven't got time to waste interviewing unsuitable applicants.

Right now we need bright people with programming experience for good career-building appointments throughout the Midlands. If you are currently working in London or the South-East, the same salary in the Midlands could give you substantially more disposable income and a better quality of life, if you are from elsewhere the Midlands still has much to offer.

If you think you are good enough ring Peter Keay on 021-643 6118, or write and we'll send you a Personnel Profile to fill in.

Project Recruitment Limited
D. P. and Computer Staff Recruitment

3429, 3431, 3433, 3435, 3437, 3439, 3441, 3443, 3445, 3447, 3449, 3451, 3453, 3

Computer Operations Professionals

What goes up must come down, right? Wrong.

And just who do we think we are, defying the laws of gravity? Well, we're BL Systems Limited, and the reason we're so sure that Sir Isaac Newton was misinformed is quite simple—all these positions have been created as a direct result of internal promotions and expansion. When men and women start going up in our company, they keep right on going, thanks to our programme of continual training and personal development. All the positions are based at our large ICL-based Data Centre in Cowley, Oxford—except for some IBM Operating posts located at the Cowley Service Data Centre, linked to our CDC at Redditch. It's a case of pleasing all of the people all of the time...

Operators £5,500-£7,000

For the ICL operating jobs, you'll need experience of running under G3, DME or VME/B to join our highly professional team.

IBM Operators need knowledge of MVS/JES, and will operate remote job entry terminals, submitting input, controlling workflow and completing work schedules to agreed deadlines.

In all cases, we work a 3 shift, 24 hour/5 day system, and voluntary overtime is available.

Network Controller c. £6,000

Here, you'll join a compact team supporting RJE, TP and MOP users and be responsible for hardware and software support—e.g. FEP modems, DCPs, TCPs and TE's. ICL 1900/2100 series and VME/B experience would be an advantage.

Operations Support Analyst c. £6,000

Working with a team providing a link between development, operations and users, your experience must include JCL, ICL G3 and/or VME/B operating systems. A flair for problem solving would be beneficial.

IBM people can skip this paragraph. The Data Centre operates a 2960/DME + 1904S running under G3 Shared Filestore operating system with RJE, TP, MOP and batch users—we'll shortly be embarking on a new phase to VME/B using large mainframes in our continued growth, to provide service to our users.

These are not just jobs, but real career opportunities with salaries, relocation packages and other benefits to match—if you'd like to find out all the details please phone Ray Brown, our Operations Manager, on Oxford (0865) 778966 ext. 3293 or write for an application form to: Wendy Brown, Co-ordinator, Personnel Development, BL Systems Ltd., Data Centre PO. Box 5, Redditch, Worcs.

Look out, Einstein, you're next on the list...

Computer Professionals Come to South Africa on contract or permanent appointment

South Africa's mining industry is growing, and our client, a major Mining Corporation, is growing too. They need new skills for the technological applications of the 1980's.

Senior Technical Analyst/ Programmer

Up to £11,000 p.a. plus bonus

To be responsible for the design, programming, documentation and maintenance of a variety of technical computer systems, as well as advice on their use and application. Notably geo-statistical ore reserve systems, financial risk analysis and economic modelling, computer control of sophisticated analytical instrumentation and laboratory data flow as well as mining exploration and planning projects. Experience in any of the above would be a decided advantage, but it is essential to have had a minimum of 5 years' technical systems/programming experience in FORTRAN—preferably allied to a degree in Computer Science or Applied Mathematical/Statistical training.

Programmers

Up to £8,500 p.a. plus bonus

To be responsible for the production and maintenance of working programmes from written specifications according to established standards for a variety of commercial and technical applications in the mining industry. A minimum of 2 years' programming experience in COBOL and RPG/II is essential, preferably allied with formal tertiary training in Computer Science and a knowledge of FORTRAN.

Available on contract or permanent basis, these positions offer a minimum of 8 1/2% annual bonus, free housing, relocation allowance and paid airfare for self and family, plus other benefits, including medical insurance. South Africa offers a change for the better, lower cost of living and taxation—the purchasing power of the Rand is approximately equal to that of the Pound and VAT is only 4%—good climate, excellent schooling, recreational and sporting facilities. The salary quoted is converted at £1 = R1.80 as at 21st April 1980. Interviews will be conducted in London and at other major centres. For a full discussion please contact Keith Robson on 01-439 3300 between 9 a.m. and 5 p.m. or write in complete confidence with full career details and a contact phone number to reach him before 27th June 1980 at Austin Knight Limited, London W1A 1DS, quoting reference TST.

Great Expectations!

June's expecting to baby in October — congratulations June, sorry to lose you, which means that we're expecting to replace her with a first-class

SENIOR COMPUTER OPERATOR/ OPERATIONS MANAGER

The job would suit a man just as well as a woman, someone in their early 30s with the right training, personality and experience — we have a Burroughs 80 machine so familiarity breeds content!

Apart from operating the computer yourself and being in charge of one other operator, we'll expect you to have the maturity to run the department, co-ordinating the work, supervising the care of the equipment and keeping in touch with the manufacturers in order to be up to date on the latest developments of the system's software and hardware. You'll also help to select and train any operators we may have in the future, evaluating their performance and making sure they maintain a system log.

Our hours are 8-5 and our offices are very pleasant and comfortable — and just around the corner from South Kensington in an attractive part of West London. As far as salary is concerned you'll have to help us figure that out yourself, but we guarantee you won't be disappointed.

If you're ready to use your operator skills and experience as a stepping stone to management, tell us about yourself. Write to Mrs. O. Road, American Community School, 5 Cromwell Place, London SW7 2JP, or telephone 01-881 0732.

Computer Operators and Trainees

Oil Industry

London

Marathon Oil U.K. Ltd., one of the most successful organisations engaged in the exploration of oil and gas both overseas and in the North Sea are seeking experienced Computer Operators. Currently one of our major projects is the development of the North Sea Brae Field, so considerable reliance is placed on our computer facilities — at the moment, these consist of Hewlett Packard and Datapoint mini computers though IBM 4300 series equipment is likely to be installed in London in 1981.

Our Datapoint installation is one of the largest of its type in the country, comprising Local Application Processors, VDU's, Graph Plotter, Digitizer, Remote Data Entry terminals and Data Communications terminals on line to our IBM 370/188s and Burroughs 8680s in the United States. We're looking for men and women with experience on minis or small/medium mainframe machines — particularly those we've mentioned — and to cope with growth, we're expanding our UK computer operations to 24 hour/7 day working.

We'll go into details of shift patterns when we meet you, but the system is specially designed to give plenty of weekend leave.

TRAINERS

We also require a limited number of trainee Computer Operators, ideally aged 18-22 and educated to 'O' level standard in scientific or practical subjects.

Salaries and benefits are of the standard you'd expect from a progressive company and you'll be based in London, at our Marylebone Road Headquarters. For further details, contact:

Paul Wood, Marathon Oil U.K. Ltd.,
174 Marylebone Road, London NW1 5AT.
Tel: 01-486 0222.

NEXT WEEK NORTHERN RECRUITMENT FEATURE

Advertisers are reminded that the next Computer Weekly Northern Recruitment Feature will be published on June 26 and will highlight career opportunities in the North.

Spec reservations should be made as soon as possible to:

Owen Kelly — Manchester — 061-872 4211

Julia Hannaford — London — 01-261 8002

Copy Deadline PM Friday before

COMPUTER WEEKLY
THE INDUSTRY'S WIDEST READ AND MOST REQUESTED NEWSPAPER

DP MANAGER

CRAWLEY, SUSSEX
c. £10,000 p.a.

Unilock Partitions, a member of the Unilock Group of Companies and the leading European supplier of relocatable office partitions, is currently expanding its computer operations. An ICL 2903 is already well established and an advanced computer graphics system will be installed very shortly.

To assist in the operation of these systems and their further development, a DP Manager, who will report to the Computer Services Manager, is to be appointed. Applicants should be in the age range 25-35, have experience of Systems Analysis and Design and preferably a knowledge of Fortran IV or RPG II.

The successful candidate can look forward to earnings in excess of £10,000 per annum, together with participation in contributory pension and private medical schemes. If appropriate, relocation assistance will be provided.

Applicants should send CV with full personal and career details to:

John Davine
Computer Services Manager
UNILOCK PARTITIONS
Unilock Road, Crawley, West Sussex
BN1 1UH

University of Petroleum and Minerals Dhahran, Saudi Arabia

Our configuration consists of an IBM 3033 and an IBM 370/168 operating under VM/CMS-SPF, MUB/TSP-SPF and CICS with telecommunications/teleprocessing networks. We now need the following:

SYSTEMS PROGRAMMERS

With a B.Sc. degree, 3-5 years experience and a knowledge of Assembler and PL/I. Experience gained in a higher educational environment would be an advantage.

PROGRAMMER/ANALYST-ACADEMIC/RESEARCH SUPPORT

With a B.Sc. degree or engineering B.Sc. degree with Fortran and/or PL/I experience. A working knowledge of HSL/SPF or any of the following packages is desirable: CICS, DB2, ST/CL, CPM, TSO, JCL, REXX, and others.

ADMIN. D.R. SUPPORT

With a B.Sc. degree and 3-5 years experience in business D.P. The work will involve systems development and maintenance using CICS and VSAM.

The University offers regular renewable 2 year contracts, tax free competitive salaries and allowances, plus air transport and from Dhahran for each 2 year tour. Housing in kind will be provided if available, otherwise a cash allowance will be made for outside living. There are 45 days paid vacation and generous holidays.

Please apply as soon as possible with a detailed C.V. including home and office addresses and phone numbers to: University of Petroleum and Minerals, P.O. Box 8133, Dhahran, Saudi Arabia. Broughton House, 8, 7, and 6 Parkville Street, London W1K 2BR. Tel. 01-794 0001.

AEROSPACE PROJECTS WEST GERMANY

Analyst Programmers/ Systems Programmers

DM 50,000 - DM 80,000

Science Systems Ltd., a systems house specialising in the scientific/technical areas of computing, are seeking to recruit a number of experienced personnel to work on advanced technology projects in West Germany.

Ideally candidates should possess a numerate degree and have had a minimum of two years programming experience in a real-time environment using FORTRAN and/or ASSEMBLER.

Exposure to any of the following hardware would be extremely advantageous.

SEL 32/70 series
MODCOMP 4/Classic
SIEMENS 330
UNIVAC 1100

HP 2100
ITT 3200
SIGMA 7/9
HONEYWELL 6 or 66

Apart from the attractive salaries, Science Systems offers removal and other expenses plus the normal benefits that are associated with a progressive company.

Fortune tellers can give a fascinating insight into your future — but they can never give guarantees. However, our client in Surrey has a computer development programme which really is guaranteed.

It's currently based on a Univac 1100/81 which will be upgraded to an 82.

And a big development programme includes some Univac V77 minis plus around 100 user terminals and a superb new building.

It's all pretty exciting and it means that the DP staff team is going to have to develop along with the hardware.

At the moment they're seeking Analysts and Programmers who have had at least two years experience.

All positions offer really attractive salary/benefits packages with prospects for a bright future. And that's not just gazing — that's a guaranteed commitment.

For full details just phone 01-546 6230 and speak to Jason Palmer or Theresa Farns.

Or write to Bull Holmes Bartlett Ltd. (PT),
45 Abchurch Lane, London EC4N 3FE

WEST GLAMORGAN COUNTY COUNCIL COUNTY ENGINEER & SURVEYORS DEPARTMENT ASSISTANT TECHNICAL OFFICER (COMPUTER)

Ref: 819/08/009

Pembroke Buildings, Swansea

The opportunity exists for the right sort of person to assist in the support, maintenance and development of a wide variety of computer applications within the technical environment of the County Engineer's Department.

The successful applicant will also be required to help meet the challenge of the current transfer to a new range of ICL 2960/2972 computer and the successful candidate will hold a degree or equivalent qualification in Civil Engineering, mathematics or computing. The Department also owns an off-line drum plotter.

The person appointed will also be involved in user liaison and training. He/she will probably hold a degree or equivalent qualification in Civil Engineering, mathematics or computing, and proven experience in computer systems although not necessarily related to County Highway Department. A sound knowledge of FORTRAN is essential and previous experience of COBOL or BASIC would be a definite advantage. A professional qualification is preferable but not essential.

The remuneration package will be related to qualifications and experience. Salary £5,608 to £11,067 per annum.

For application forms write to: The County Clerk, Central Personnel Unit, The Guildhall, Swansea, enclosing a large stamped addressed envelope. Closing date for the receipt of completed application forms 10th July, 1980.

ANY FORM OF DISCRIMINATION WILL BE DISALLOWED. PLEASE QUOTE APPROPRIATE REFERENCE NUMBER.

Sales Support -Data Communications

£8,000 + car

Data Logic is probably the fastest-growing systems group in the UK. Our Data Communications Division is looking for suitably qualified electronics people to provide sales and technical support to existing and potential users of our modems, multiplexers and network management systems.

This is an opportunity to become fully involved in the sales function including negotiation and presentation to prospects. You may be working at the moment in pre-sales support or field service engineering, or you may be running data communications networks on the user side. Whatever your background it is essential that you demonstrate the ability to keep pace within a marketing oriented group which aims to further improve on its 50% annual growth rate.

Applicants must be qualified to at least ONC level, preferably HNC or equivalent, in electronics engineering or a similar discipline. HM forces qualifications are also welcome. Full training will be given in Data Logic products.

Based at our Marylebone Road headquarters in London, you will operate throughout the UK with emphasis on the South East of England. The salary is supported by a wide range of benefits.

Write with full career details, or telephone for an application form, to: John I. Wilson, Personnel Department, Data Logic Limited, 29 Marylebone Road, London NW1. Tel: 01-486 7288.

SYSTEMS ANALYSIS.

There's a growing shortage of experienced personnel within the computer industry.

And to help ease this shortage, the Manpower Services Commission, under TOPS, the Training Opportunities

Scheme, are sponsoring a fifteen week Systems Analysis course, starting September, 1980 at Bolton Institute of Technology.

WHAT DO YOU LEARN? Training covers systems analysis and design, basic statistics, business administration, accounts, computer theory and programming.

Successful completion of the course leads to the National Computer Centre Basic Certificate in Systems Analysis, which will equip you for employment as a Trainee Analyst/Programmer.

WOULD IT SUIT YOU? You should be aged between 25 and 35, and have a mature outlook, a logical mind and the ability to work in a highly technical environment. Previous experience of business or commerce would be advantageous.

You should have O'levels in English and Maths plus at least one A'level.

You will be required to attend a pre-course aptitude test and interview.

TOPS ALLOWANCES
All tuition is free and you'll receive a TOPS tax-free weekly allowance. Travel and/or lodging allowances may also be paid.

Find out more by sending the coupon to Lesley Harris, Manpower Services Commission, Training Services Division, District Office, Churchgate House, Churchgate, Bolton.

I am interested in the Systems Analysis Course.

TOPS

TOPS TRAINING OPPORTUNITIES SCHEME
COURSES ARE OPEN TO BOTH MEN AND WOMEN WHO HAVE A QUALIFYING A'LEVEL OR EQUIVALENT. THE COURSE IS FULL-TIME AND DURATION FOR TWO YEARS. (DO NOT HAVE BEEN ON A TOPS COURSE IN THE LAST FIVE YEARS)

Your part in it.

You will be working with one of the most advanced computer systems worldwide, which currently comprises of two IBM 3033's 158 and 168. You will be a member of the sophisticated EDP department which serves one of the world's leading oil companies. You will have access to an extensive in-house training department which ensures that employees are au fait with the very latest DP developments. You will be living in a developed complex based on the ARABIAN Gulf, and enjoying excellent recreational facilities, free medical treatment, and generous paid holidays amongst the many benefits. You will earn a starting salary commensurate with your qualifications and skills. If you match the requirements listed below, ring PETER MADAMS quoting CW5/6 A/456 now.

PROGRAMMER/ANALYSTS To £14,000 NET

At least 3 years programming experience in PL1/COBOL or FORTRAN. A knowledge of IMS Database and teleprocessing applications are desirable.

PROGRAMMER MARK IV To £15,000 NET

A sound knowledge of Mark IV systems, preferably in an engineering environment.

SYSTEMS ANALYSTS To £16,000 NET

Commercial and Scientific. At least 5 years experience in DP with proven experience in conducting feasibility studies for a range of commercial and scientific applications.

SYSTEMS DESIGNERS To £17,000 NET

At least 2 years proven Design experience especially in the areas of Materials Planning, and Transportation Systems.

These positions are open to men or women preferably educated to degree level on a one year single status renewable contract.

SA Computing Services Association

R & D Systems Software Manager

N. London

c.£13000 + Cortina Ghia

Our client is a worldwide leader in the supply of advanced computerised systems to the colour printing and graphic arts industries. Current projects are multi-disciplined using state-of-the-art technology in minis, micros, lasers and complex optical systems. The company is seeking to appoint a suitably qualified candidate to this new staff management position.

Ideally you should have had experience in a position of responsibility in at least one software development project. You will be aware of the need for adequate standards and be capable of specifying those required. You will be required to advise and consult with existing engineering managers on development methodology and systems. You will also be capable of providing technical guidance to development programmers within the division.

Additionally, candidates who have DEC PDP11 experience, knowledge of microprocessors and experience in providing technical career planning/counselling would be advised to apply.

This is an excellent opportunity to contribute to an experienced management team at a significant level with the attraction of seeing the lessons of experience adopted in practice.

Apply in confidence to Terry Harvey by sending an up-to-date C.V. or telephone for an application form, evenings Great Missenden (02406) 4705, or daytime as below:

01-549 6441, 24-hour service

Great Opportunity!

For a career minded salesperson to realise their full potential. For the right person we offer:

- a ground floor opportunity where you can make a substantial contribution,
- a dynamic growing company,
- the scope to develop our marketing and selling activities,
- a product of the 80s — minicomputers and commercial packages,
- location in South East England (Croydon based).

Sales Manager c.£15,000

We are a company providing the full range of computer services mainly in London and South East England. Our aim has always been to provide a professional service of high quality in all areas of activity.

We have recently started selling Data General minicomputers, with both general and industry specific packages. Our packages are written in COBOL and we are able to offer systems tailored precisely to our clients' needs.

We are looking for an entrepreneurial minded salesperson who will make a major contribution to the development of our marketing and selling activities and the growth of our company.

You must be fully aware of the commercial real time minicomputer market and have a good appreciation of commercial systems.

An executive car will be provided. Similar opportunities also exist in Birmingham and Luton.

For further information please contact BRIAN BATHGATE as below or outside office hours on Oxted 4571.

ICL System 4/70 ENGINEERS c £15K+2L Granada

Capitalise on your present
experience whilst
investing for the future

A unique opportunity has occurred for an experienced ICL 4/70 engineer to use his current knowledge whilst cross-training to both IBM and Amdahl's current mainframes.

If you are a Senior/Support level engineer well experienced on both the 4/70 and 4/72 our client can offer you a solid future.

Contact Peter Gorton or Howard Wynne on 01-637 9611 for details.

PDP ENGINEERS experienced up to 11/70 or VAX

HERE IS AN OPPORTUNITY TO MOVE TO AN IMPORTANT MANAGEMENT POSITION

We have been retained to seek a capable and competent ENGINEER who possesses in-depth knowledge of the above systems and who now wishes to develop management skills.

We are looking for an individual capable of controlling a project and advising at senior management level. The right candidate will possess initiative and be able to apply his equipment and industry knowledge to this project management role.

The company is based in Hertfordshire and is part of a £100 million organisation; they are fast moving and offer a stimulating environment for an engineer to develop management skills.

A very generous remuneration package will reflect the importance of the position; a company car will be provided and full relocation expenses paid where appropriate.

For further discussion please call Howard Wynne immediately on 01-637 9611

MANAGEMENT & EXECUTIVE SELECTION

OPERATIONS CONTROLLER - £7,000 - 5th year

Part of this successful corporation's development is the manufacture and marketing of a new generation of super minis. An outstanding opportunity has arisen for an Operations Controller to maintain their in-house installation and train with software support and pre-sales divisions.

A smart, intelligent operations person (preferably from a mainframe background) can expect to move into operational or sales support areas.

For further details please contact Penny Stock on 01-240 1456 PS 11406/CW18/6/80 (10/22)

TECHNICAL SUPPORT - ICL 2904 EXEC 2a - Hertfordshire - £5,750

An expanding company in Hertfordshire requires an operator who has the ability to write Macro's, correct JCL errors and restore files etc.

The installation runs under a three shift system at present but this will possibly be reduced to two. A starting salary of £5,750 can be expected along with the obvious career opportunity this particular position can offer.

Please telephone Sue Fowler on 01-240-1458 for further details SF 10753 CW 18-8-80

N.W. KENT - MVS/JCL WRITER - £6,500 + 5% Mortgage

A major finance Company will shortly be enhancing their operating system and are looking to recruit a JCL Writer with 3 years MVS & DOS experience.

3031 mainframe running under MVS/JES 2. Days only offer initial period on shift.

Tel. Sally Ann Bradley on 01-240-2441.

TWO OPERATORS - Any Hardware Background Generous Relocation Package - £5,500+

Tired of commuting? Two intelligent operators, with any hardware background, are required to work at a sophisticated installation in rural Cambridgeshire which operates a two shift system. Although you will be working within a relaxed atmosphere and with friendly people, your career prospects will not be ignored.

A generous relocation package is given to you together with the advantage of being able to buy brand new property for as little as £20,000.

For further details please ring Sue Fowler on 01-240-1458 SF10414 CW 18-8-80

SYSTEM 34 SUPERVISOR/OPERATOR - Central London - £8,000

A well qualified systems operator, preferably from a System 34 or 35 background, could look forward to some very exciting projects at our client's Central London based System 34 site.

The post is seen as an important operating position where you will also take responsibility for a small team of data prep. staff. Future plans include involvement in the establishment and smooth running of additional remote sites.

Age is irrelevant as long as you can demonstrate a real sense of maturity.

Please contact Kay Stebbings on 01-240-1456 now for more details. KS 11404 CW 18-8-80

SALES EXECUTIVES

C. £12,000 + COMPANY CAR

The Terminals and Communications Division of Transdata Limited, a leading British manufacturer of intelligent data terminals and micro based computer systems, urgently needs professional sales people to sell an exciting range of terminals and data communications systems.

Increased demand for these products has created vacancies in the following areas:

- ★BERKSHIRE, HAMPSHIRE and the WEST COUNTRY
- ★THE MIDLANDS, BIRMINGHAM and STAFFS
- ★LEICESTERSHIRE, CAMBS and EAST ANGLIA

The above positions are open to both men and women, preferably aged 25-35.

If you would like to join a young, dynamic sales team and can offer a minimum of 2 years' related sales experience in exchange for high earnings and excellent promotional opportunities, then telephone BOB LEDWELL on 01-403 5115, or write to him at: BATTLE BRIDGE HOUSE, 87-95 TOOLEY STREET, LONDON SE1

DATA PROCESSING MANAGER

Our Client, a well-known International Engineering Organisation situated close to the A1 in East Anglia, are seeking a D.P. Manager for a department using a Data Terminal linked to an IBM 4341.

The hardware and systems at present being developed will provide interesting and challenging prospects including implementing and maintaining a highly sophisticated production control system.

Candidates with a sound practical background should be familiar with Cobol and have the maturity to be involved with Management on a day-to-day basis.

This is an ideal opportunity for a person (male or female) seeking a good secure position in a friendly organisation who now wishes to settle in a country environment close to excellent facilities. The salary envisaged is circa 28,500 p.a. with benefits and relocation assistance in line with modern Company practice.

Please write, in the strictest confidence, giving brief career details to date to:

J.A.B. Stevens,
Tisbury Resources Advertising,
118a Bedford Road, Kempston, Bedford MK42 8BH.
(Please specify in covering letter: Companies to whom you do not wish your application to be sent.)

Gwent college of higher education SENIOR COMPUTER TECHNICIAN

Applications are invited for the above post in the day-time. The successful candidate will be required to take on the design, implementation and maintenance of mainframe and micro computer systems. Programming experience is needed in BASIC, COBOL, and PL/I. Other high-level languages are a plus. Salary £11,000 - £12,000 p.a. plus benefits. Applications should be sent to the Principal, Gwent College of Higher Education, P.O. Box 200, Gwent, NP23 5TA. Closing date 14th July 1980.

To £9.5K CHIEF PROGRAMMER

SALES PEOPLE £11-£17k + CAR

- ★ *career progression*
- ★ *innovation*
- ★ *financial rewards*

A major computer manufacturer known for its technological excellence throughout the world is continually increasing its sales force to market not only their existing products but also their new innovative ones that cover several fields: data processing, word processing, advanced business systems and scientific and technical.

If your background covers any of these areas our client would like to talk to you about your future within their organisation. Opportunities exist in the South East, Midlands, Manchester and the North and Scotland.

Naturally, comprehensive sales and product training courses are provided.

For a detailed discussion about this opportunity contact Robin de Rouan or Tony McGrath on 01-637 9611.

senior sales executives

— the outstanding opportunity of the 80s. In the fastest growing market sector of the computer industry

colour graphics

One of the leading manufacturers and distributors of COLOUR GRAPHIC DISPLAY TERMINALS and systems in the U.K., has asked us to identify and select two senior sales executives to fulfil vitally important positions in the South-East and the Midlands/North.

You will be responsible for the professional development of established major accounts and also for obtaining new business in a wide market sector as the products range from low cost graphic terminals to one of the most advanced systems available today.

Candidates should possess a demonstrable track record of sales success in the computer industry preferably in a technical/industrial applications area.

The remuneration package reflects the importance of these positions and will consist of a high basic salary, excellent "no ceiling" commission scheme, company car and, naturally, expenses.

Contact Tony McGrath on 01-637 9611.

and arrange a meeting.

Systems Programmer

New IBM 4331

Surrey

(Full Relocation)

SALARY NEGOTIABLE AROUND £11,000 P.A.

This is the key role in a small newly constructed team. There is no doubt that you will have an unusual opportunity to make a profound impact on the success of our Client's Data Processing development — working in the UK and Europe.

The integrated Data Processing policy now being implemented has resulted in a substantially increased commitment to computerised systems across a wide range of commercial and manufacturing control applications.

This heralds a new era in the Company's history which will commence with the implementation of an IBM 4331, with a UK communications network and data base facilities.

To fully utilise this technology, they seek a skilled

DOS SYSTEMS PROGRAMMER

Ideally you will have gained experience in a CICS and DL/I environment, although a knowledge of other DB and TP systems would be perfectly acceptable.

Following company systems/technical training in Sweden, you will have responsibility not only for software techniques and standards, but also for providing technical guidance to the Applications Teams.

To discuss this unusual opportunity further, contact Dave Scarlett on 01-935 0671 or evenings and weekends (before 9.00pm) 01-540 2500.

Analyst/Programmers

£6-£9,000

Put the sparkle back into your career

Since its formation in 1964, Computer Management Group has grown to become one of the largest Independent Computer Services organisations in Western Europe. This is because at CMG the accent has always been on 'total' customer service and on generously rewarding achievement. The Company has long been recognised as one of the industry's highest payers and offers considerable scope for a challenging career in all aspects of Data Processing.

Our services involve not only Consultancy and Software, but also purpose-built package systems that can be operated either on our clients' own computers or on CMG's.

The City of London subsidiary is now offering outstanding opportunities to young Programmers and Analysts. The work is stimulating, involves many different types of computers and languages and offers opportunities of working on many different types of financial systems.

Ideally you will be aged 21-25 and have 2-3 years experience in a user orientated environment. Just as important, you should be a good technician capable of enhancing the Company's excellent reputation.

All promotions are made from within the Company and these positions carry equal management potential. We offer excellent starting salaries which are commensurate with experience and ability PLUS the following benefits:

- ★ 21-26 days holiday
- ★ Non-contributory pension
- ★ Free BUPA
- ★ Relocation assistance
- ★ Profit sharing
- ★ Share purchase scheme
- ★ Non-contributory life assurance

If you'd like to find out more about what makes CMG so special, please telephone Cliff Kentish on 01-481 3881 or send the coupon below to him at—

CMG (City of London) Ltd.,
Eastgate, 73 Leman Street,

COMPUTER ENGINEERS

to £9K+car

Field Service Engineers, fed up with sitting in traffic jams all day? Here is a chance to move indoors and still keep that company car!

One of the world's leading computer manufacturers is offering the opportunity to engineers to work on their superior large mainframes and industry standard peripherals.

With one of the most effective training schemas available today, you will quickly learn their systems and join a team at one of their prestigious sites in LONDON.

Recent expansion has created vacancies for Senior and Junior level engineers. As a **senior engineer** you will already have a minimum of three years' computer experience, preferably on large mainframes. As a **junior engineer** you will have determination and proven aptitude within a relevant background.

If you're good, salaries to £9K + CAR
So call Howard Wynne on 01-637 9611

are you a young graduate computer engineer looking for an opportunity to develop your career in high technology with one of the leading companies in the industry

As a senior project engineer you will assume full responsibility for design, engineering, implementation and commissioning of sophisticated computer systems. Liaison with clients around the U.K. and overseas will introduce interesting travel opportunities.

You will be working in a dynamic friendly environment and will be provided with all the training and support needed to develop rapidly.

These positions will require a *degree or equivalent* with at least one year's digital/mini experience. An appreciation of systems software would be an additional asset.

Salaries will be attractive with the usual large company benefits, including generous re-location assistance to HERTFORDSHIRE if appropriate.

If you are looking to develop your career call Howard Wynne on 01-637-9611 Today!

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

MANAGEMENT &
EXECUTIVE SELECTION

A rare opportunity for a dedicated Field Service Engineer to join a truly progressive and highly successful organisation.

In Europe we have experienced a tremendous amount of success in marketing communications products and services, and our Hertfordshire based operation has had particular responsibility for such areas as: Voice Communications, Record Communications and Data Communications.

Within the Technical Support Group we have created an exceptional opening for a first class Field Service Engineer to become our-

Hardware Specialist

(Mini Computers and Data Communications)

South Herts.

c. £8,500 plus car

In addition to your sound hardware knowledge in the areas of mini computers/data communications, you will be expected to demonstrate experience of software, installation, commissioning and problem solving.

The successful applicant will be offered the opportunity of product training overseas, and will be expected to travel throughout the world on troubleshooting assignments as and when necessary.

This position certainly represents a challenge to a career minded individual, and we are confident that the job content and personal growth prospects are second-to-none.

MANAGEMENT &
EXECUTIVE SELECTION

Time waits for no man

Things happen faster in the computer world than in any other — being in the right place at the right time is the only way to keep on top of that world as a programmer.

Right now, there's no better place than Data Logic's Professional Services Division. As one of Britain's leading groups of software specialists, we can put you into the forefront of DP in industry and commerce, the public and private sectors — programming for the most advanced new systems, the most sophisticated and complex configurations. You'll get the chance to use the latest techniques and languages — even develop your own. And you won't be tied to any one make of equipment, or any particular type of application, as you would be working with a manufacturer or user.

You'll earn between £6,000-£10,000 depending on your experience, plus profit share and travel expenses — you must be prepared to spend much of your time on customer sites, from a Greenford base.

Either write with full career details, or telephone for further information to: Barbara Hawkins, Personnel Department, Data Logic Limited, Westway House, 320 Ruislip Road East, Greenford, Middlesex UB6 9BH. Tel: 01-578 9111. Alternatively, telephone our 24 hour answering service on 01-235 1535 for an application form.

Unusual chance for SYSTEMS ANALYSTS

who want to do something more
advanced than payrolls and
accounting routines
CENTRAL LONDON
£7,500 to £10,000

We are recruiting for clients, a major mainframe installation with satellite minis, who have an extensive schedule of development work, principally involving database, communications and on-line techniques. The work is likely to be more interesting and challenging than in most analysts' jobs.

Our clients have a good training budget, and career prospects and employment conditions are very sound. Most of the analysis work is related to the mainframe, but opportunities to work on minis will arise, and analysts with either mainframe or mini experience are invited to apply.

Due to the volume of development work, we are recruiting at several levels; the minimum experience requirement being two years' analysis or one year analysis plus two years' programming.

Please ring us in confidence for an initial talk, quoting ref. 672, or leave a message on our answering machine after hours and we will contact you.

SCIENTIFIC PROGRAMMER for COMPUTER AIDED DESIGN

Mullard Southampton is a leader in the dynamic world of the silicon chip; we design, develop and manufacture MOS integrated circuits.

One of our key areas is the Computer Aided Design activity which is essential in the design of integrated circuits.

We now offer you the opportunity to join us at the forefront of the micro-electronics world — we need someone (male or female), with programming knowledge and experience in a scientific application, preferably Fortran or Algol, to join our CAD team. The work is varied — ranging from creating systems to programming on dedicated computers — 128K word SEL 32/65 computers with Tektronix graphics.

You will probably have a degree in a relevant scientific subject with an appreciation of electronics and be able to demonstrate to us a practical aptitude in using computers.

Salary will depend on the experience you can offer us and there are excellent fringe benefits, including generous relocation expenses where necessary.

Please write with details of your qualifications, experience and current salary to: John Wells, Personnel Officer, Mullard Southampton, Millbrook Industrial Estate, Southampton SO9 7SH. Or telephone Southampton (0703) 775533.

Century Data Systems
A Raytheon Company

Sales Executives

Our intention is to be

No.1 in Computer

Peripherals —

**and with Xerox on our side
we'll probably make it!**

Century Data Systems was founded in 1988 and is now an extensive international organisation within the Xerox Corporation which also embraces such well established names as DIABLO, SHUGART and VERBATIM.

We market a broad portfolio of high performance magnetic disk products, predominantly to OEM outlets, including the TRIDENT range of removable disk pack drives, the DIABLO range of cartridge disk drives and the MARKSMAN range of micro-controlled Winchester drives.

At the present time our total European operation is growing in excess of 100% per annum and we need two established computer industry salesmen, preferably with direct experience of selling peripherals in the OEM marketplace, to help us build on our existing success in the

UNITED KINGDOM and EUROPE

Initial training will take place in CALIFORNIA and subsequent sales activity will either involve the United Kingdom or European countries such as FRANCE, ITALY, SPAIN and SCANDINAVIA.

The opportunities for career development are considerable with excellent prospects for suitable candidates to

Advance into Management

within the first two years of employment.

The jobs are both based in BRACKNELL in Berkshire and offer on-target earnings of

£16,000 + COMPANY CAR

(Plus over-quota commission multiplier and bonus)

Please supply complete career details to Alan Williams quoting reference BMC/006.

THE SALES BIT

What makes people tick

OFTEN an order can be lost owing to the buyer apparently acting in an irrational manner. The salesman is confounded. "Why on earth did he do that? I don't understand it."

Every angle was considered, all the possibilities explored, the alternatives analysed in a logical manner, yet the buyer chose not only some other product, but one which was clearly not the best for the job.

Had the job of selection been his, the salesman would certainly not have made the same choice, even to the exclusion of his own product — so who can blame him for losing the order?

This kind of situation is more common than one might initially think, but rather than being an irrational act on the part of the buyer is often an error of judgment by the salesman.

When you think about it, such unexpected behaviour confronts us all from time to time, sometimes in a business environment, but often within the social context. You create a strategy of make an approach based on what you consider to be the likely reaction, and suddenly you are shocked, horrified, distressed, disappointed, perplexed or even annoyed, to discover that your ideas are rejected in preference to an alternative which is so clearly inappropriate, inadequate, inferior, unsuitable, impractical, too expensive, self-indulgent or even stupid.

Yet the fact remains, you have been rejected, the decision has been made against you and it's difficult to get it reversed (but not impossible).

So why do people often appear to act in such an Inconceivable and Illogical way? The answer is that they usually don't — at least not from their own point of view.

One of the big mistakes we all make in life is to expect, consciously and unconsciously, other people to work to the same set of rules as ourselves; that their thoughts and reactions in a given situation will be the same as our own. What we may consider to be a minor and transient phenomenon can have an impact upon others which is both profound and permanent.

On the other hand, our own momentous and unsolvable problems may be seen by others as trivial.

THE user's view of message switching systems. In private communications networks is given in a new publication from ITT Business Systems explaining the economics of such systems. Spokesmen from four companies of different sizes and operating in unrelated fields comment on the economic benefits of message switching within their own organisations. Copies of the publication are available from Publicity Department, ITT Business Systems, Lion Buildings, Crowhurst Road, Hollingbury, Brighton.

Now company
A NEW company, Advanced Media, has been formed to market floppy discs, disc packs, magnetic tape, ribbons and other media. The address is Unit H, St Anthony's Way, Epsom Road, Feltham, Middlesex TW14 0NH, Tel: 01-751 2136.

Puzzle Answer
THIS little venture serves to illustrate various "properties" that every square must have. Set out in brief, these requirements are: (1) No square can end in 2, 3, 7 or 8; (2) All squares have a digital root of 1, 4, 7 or 9; (3) No number of the form 3n + 2 can be a square; (4) If the last digit of a square is 5, then the figure 2 must precede it; (5) No square can be made up entirely from odd digits; (6) If a square ends in 8, the preceding figure is always odd.

Of the 10 numbers given, only the sixth does not fit these rules — and it is, in fact, the square of 54,133,240.

Going to town
MOVING into town from High Wycombe, MOE Management Services is now located at 111 Wardour Street, London, W1. The new telephone number is 01-430 9317.

On the move
AS a result of the continued expansion of its services to engineers and designers, Fraser Nash (Consultancy) has moved to larger premises at River 30, 31, 32, 33, Teddington Road, Hampton, Middlesex TW14 0NH, Tel: 01-831 4141.
